Index

amplitude, 22
analytical, 28
astrophysical, 2

Bénard cells, 23
bottom surface, 34
boundary conditions, 21
buoyancy, 6, 23
caverns, 13
coefficient of viscosity, 5
columnar instability, 59
compressible, 12
conducting fluids, 2
conduction, 12
conservation of energy, 20
constant volume, 34, 46
constitutive relations, 19, 44
convection, 10
convective flow, 31
coupling, 2
critical Rayleigh number, 43, 59
critical value, 23
Darcy’s law, 31
decay, 22
deforms, 3
density, 3
density difference, 10
destabilize, 31, 59
destabilizing effect, 68
developed flow, 22
diffusion, 31
dimensionless, 3
discrete structure, 14
dispersion relation, 52
displaced molecules, 6
disturbance, 22
double-diffusive convection, 59

effective thermal conductivity, 46
electric currents, 2
electromagnetic, 2
entropy, 3
fine dust, 31, 44, 59
flow domain, 21
flow governing, 61
flow governing equations, 33
fluid, 31
fluid element, 10
free boundaries, 50
geothermal, 31

102
gravity, 4
grow, 22
Hall currents, 45
heat capacity, 11, 34, 46, 59
heat capacity , 31
heat conduction, 46, 62
horizontal layer, 32, 45, 60
hotness, 10
hydrodynamics, 3
Initial conditions, 21
instability, 23, 59
isotropic pressure, 7
kinematic viscosity, 5, 59
Kronecker delta, 7
Laminar, 11
linearized equations, 28
Lorentz force, 2
Mach number, 12
magnetic field, 31, 32
marginal state, 52
medium permeability, 57
metallic plate, 23
molecular interstices, 13
molecules, 2, 5
Newtonian, 6, 32
Newtonian fluid, 59
non-dimensional, 52
non-Newtonian, 6, 44
non-porous, 44
nonlinearities, 28
parameter, 22
Parndtl number, 13
Pascal, 4
permeability, 60
permeated, 31, 60
perturbation, 35, 48, 62
Perturbation method, 28
perturbed variables, 28
petroleum industry, 44
physical quantities, 32
Pores, 13
porosity, 13
porous material, 13
Porous medium, 7
porous medium, 13, 31
pure, 31
Rayleigh number, 23, 49
Rayleigh-Taylor instability, 31
research, 9
reticulated, 24
Reynold’s number, 12
Rivlin-Ericksen, 32
safety equipments, 9
shear damping fluid, 9
shear flow, 31, 44
shear stress tensor, 7
shear thickening, 9
shearing force, 3
solute concentration, 62
solute gradient, 60
103
specific heat, 11, 20
specific volume, 12
stability, 22, 31
state variable, 20
static liquid, 5
static temperature gradient, 43, 63
stationary convection, 52
strain rate tensor, 7
stratified, 44
streamline, 12
stress components, 17
stress tensor, 7
superposed fluids, 44
Surface tension, 5
suspended particles, 33, 59
tangential force, 4
tangential stress, 5
temperature, 10
temperature gradient, 23
thermal equilibrium, 46, 62
thermal expansion, 10
thermal instability, 23, 31
Turbulent, 11
unstable, 23
upthrust, 6
variable magnetic field, 32
velocity difference, 33
velocity gradient, 5
viscoelastic fluid, 59
viscoelastic parameter., 57
viscoelasticity, 7
