Chapter 3

Table 1: Characteristics of the subjects recruited for the study

Table 2: Physical parameters of the semen sample obtained from the exposed and non-exposed subjects

Table 3: Semen characteristics in exposed and non-exposed subjects

Table 4: Sperm kinematics assessment by computer aided sperm analysis (CASA) in the exposed and non-exposed subjects

Table 5: Sperm DNA integrity and global hypermethylation in the exposed and non-exposed subjects

Table 6: Incidence of sperm aneuploidy in the high and low radiation exposed subjects

Table 7: Multivariate analysis of the potential confounding factors on semen volume, sperm concentration and motility in the recruited subjects

Table 8: Multivariate analysis of the confounding factors on sperm viability and morphology in the recruited subjects

Table 9: Multivariate analysis of the confounding factors on sperm DNA integrity and global sperm methylation in the recruited subjects

Chapter 4

Table 1: Comparison of antioxidants and ROS level in the exposed and non-exposed subjects

Table 2: Multivariate analysis of the confounding factors on antioxidants and lipid peroxidation in the recruited subjects
Chapter 5

Table 1: Incidence of micronuclei (MN), aneuploidy and acentric fragments in peripheral blood lymphocyte of the exposed and non-exposed subjects

Table 2: Level of antioxidants & lipid peroxidation in the blood plasma of the exposed and non-exposed subjects

Table 3: Multivariate analysis of the confounding factors on chromosomal abnormalities

Table 4: Multivariate analysis of the confounding factors on antioxidants and lipid peroxidation

Chapter 6

Table 1: Reproductive hormones level in the blood plasma of the exposed and non-exposed subjects

Table 2: Multivariate analysis to find out the effect of confounding factors on FSH, LH and testosterone
