List of Figures

Fig-1.1: Types of Polymers
Fig-1.2: The specific volume of polymers as a function of temperature in the transition range
Fig-1.3: Motion of chain loops and chain segments in the transition zone
Fig-1.4: Classification of plasmas
Fig-1.5: The Neon Discharge tube
Fig-1.6: Processes in Plasma Polymerization
Fig-1.7: Surface Modification of Polymers by Plasma Treatment
Fig-1.8: Resistive type sensor
Fig-1.9: Interpenetrating polymer network of a hydrophilic and hydrophobic polymers
Fig-1.10: Four stages of the adsorption.
Fig-1.11: Multi-layer structure of condensed water
Fig-2.1 Inter-digited capacitor (IDC) pattern
Fig-2.2: Spin Coater (WS-400-6NPP-LITE)
Fig-2.3: Plasma System (emitech, k 1050x, england)
Fig-2.4: Monomer Distillation setup
Fig-2.5: RF Plasma Polymerization System
Fig-2.6: RH Measurement apparatus
Fig-2.7: Experimental set up for the measurement of relative humidity.
Fig-3.1: Schematic of the relation between film thickness, speed and concentration in the spin-coating process.
Fig-3.2: IR spectra of spin coated PMMA samples
Fig-3.3: SEM of spin coated film.
Fig-3.4: Capacitance Vs frequency variation for one sample.
Fig-3.5: Capacitance Vs Humidity variation for different thicknesses.
Fig-3.6: Thickness Vs sensitivity (slope) graph
Fig-3.7: Response and recovery time of film.
Fig-3.8: Hysteresis result for 6.11μm thickness film.
Fig-3.9: FTIR of samples plasma treated at 20watt for different time durations.
Fig-3.10: FTIR of samples plasma treated at 30watt for different time durations.
Fig-3.11: FTIR of samples plasma treated at 40watt for different time durations.
Fig-3.12: SEM of plasma treated samples
Fig-3.13: Capacitance change w.r.t. humidity for plasma treated and spin coated samples
   a)20 W, b)30W, c)40W, d) Spin Coated films.
Fig-3.14: Response and recovery time of film.
Fig-3.15: Hysteresis result for 30W/5 min. film
Fig-3.16: IR spectra of MMA (i) Un distilled (ii) Distilled (iii) Standard Aldrich
Fig-3.17: FTIR spectra of PPMMA samples
Fig-3.18: Capacitance change w.r.t. humidity for plasma polymerized samples.
Fig-3.19: Variation of Resistance with time for 75% humidity
Fig-3.20: Hysteresis result for 30W film
Fig. 4.1 SEM pictures of A,B,C,D films.
Fig-4.2 FTIR spectra with variable Relative Humidity
Fig-4.3 Variation in transmitted output Vs Relative humidity for different thicknesses.
output (b) Normalized output
Fig. 4.4. Adsorbed water as a function of thickness of the film
Fig. 4.5. The adsorption phenomena of water molecules on film (a) at lower humidity (surface
adsorption); (b) at intermediate humidity (adsorption on capillary walls) surface sites plus intra–
–grain adsorption (c) at higher humidity (full capillary condensation).

Fig 4.6 Response and Recovery Time of C film.
Fig 4.7 Change in weight with humidity for sample : a) A b) B c) C d) D.
