

List of Figures

S.N.	Name	Page No.
1.1	Role of incretins in glucose homeostasis and the action of DPP-4 enzyme	9
1.2	Secondary Structure of DPP-4 enzyme and binding site.	17
1.3	DPP-4 active site	18
1.4	Drug design strategies	21
1.5	Classification of DPP-4 inhibitors	35
1.6	Binding mode of different DPP-4 inhibitors	55
3.1	Relationships between observed inhibition values and predicted values by HQSAR models	96
3.2	Individual atomic contributions of most active compound for the activity	101
3.3	The best common pharmacophore hypotheses (AAHPR)	108
3.4	Plots of predicted vs actual pEC50 for training	109
3.5	A graph of actual versus predicted activities of the training set and test set molecules from CoMFA analysis and CoMSIA analysis	112
3.6	Contour maps for CoMFA model	114
3.7	Contour maps for CoMSIA model	114
3.8	<i>In silico</i> virtual screening funnel	119
3.9	Final 7 screened hits	119
3.10	Docking interaction of screened compound	120
3.11	Hydrophobic interaction	121
4.1	Rationale for combinatorial library generation for design of NCE	127
4.2	Combinatorial library screen work flow	127
4.3	Pharmacophore feature aligned on designed compound	129
4.4	Scatter plot	130
4.5	Selected fragment in designed molecule at S1 and S2 site	130
S4.1	Scheme 4.1	132
S4.2	Scheme 4.2	132
4.6	Hydrogen bonding interaction between compound	147
4.7	Docking alignment of all synthesized molecule in binding cavity	147
5.1	Virtual screening funnel	162
5.2	Pharmacophore mapping	164
5.3	Plots of predicted vs actual pEC50.	165
5.4	Final screened hits	169
5.5	Docking interaction of screened compound	169
5.6	lead optimization process	171
5.7	Docking interaction of designed compound SD03 and SD10	171
6.1	<i>In vitro</i> chromogenic assay results	203
6.2	Effect on serum glucose level in normal control and various treated groups	204
6.3	Effect on Hb1Aclevel in normal control and various treated groups.	205
6.4	Effect on insulin level in normal control and various treated groups.	205
6.5	Effect on cholesterol level in normal control and various treated groups	206
6.6	Effect on triglyceride level in normal control and various treated groups	206
6.7	Effect on creatinine level in normal control and various treated groups	207
6.8	Effect on SGOT level in normal control and various treated group	208
6.9	Effect on SGPT level in normal control and various treated groups	208
6.10	Effect on Total protein level in normal control and various treated groups	208
6.11	Photomicrographs of the pancreas in the diabetic rats	210
6.12	Photomicrographs of the kidney in the diabetic rats	212
6.13	Viability of (a) Caco-2 cells (b) RAW cells	213
