

LIST OF FIGURES

Fig. No.	Title	Page No.
1.1	Location of Iran and the study area.	13
1.2	Land use/land cover map of the study area.	15
1.3	Drainage map of study area.	16
1.4	Digital Elevation Model (DEM), slope, aspect and contours map of the study area.	19
1.5	Annual temperature and rain fall zones.	21
1.6	Monthly average precipitation and temperature from 1970 to 2007.	21
2.1	Location of the precipitation and temperature stations.	28
2.2	GIS model for calculation of snow cover area.	46
2.3	Flow chart of remote sensing methodology.	47
2.4	The main characteristics of the four SRES storylines and scenario families.	50
3.1	Location of the temperature stations.	63
3.2	The percentage of stations with significant trends in annual TM.	65
3.3	The percentage of stations with significant trends in annual TMAX.	66
3.4	The percentage of stations with significant trends in annual TMIN.	68
3.5	Trends ($^{\circ}\text{C}/\text{decade}$) in TM, TMAX and TMIN of annual temperature series significant at 95% confidence level.	69
3.6	Result of MK-test in TM, TMAX and TMIN of annual temperature series significant at 95% confidence level.	69
3.7	Sequential values of the statistics forward trend $u(t)$ and backward trend $u'(t)$ obtained by Sequential Mann-Kendall test for annual TM at some stations.	70

3.8	Sequential values of the statistics forward trend $u(t)$ and backward trend $u'(t)$ obtained by Sequential Mann-Kendall test for annual TMAX at some stations.	70
3.9	Sequential values of the statistics forward trend $u(t)$ and backward trend $u'(t)$ obtained by Sequential Mann-Kendall test for annual TMIN at some stations.	71
3.10	The percentage of stations with significant trends in winter TM.	72
3.11	The percentage of stations with significant trends in winter TMAX.	73
3.12	The percentage of stations with significant trends in winter TMIN.	74
3.13	The percentage of stations with significant trends in spring TM.	75
3.14	The percentage of stations with significant trends in spring TMAX.	76
3.15	The percentage of stations with significant trends in spring TMIN.	77
3.16	Trends ($^{\circ}\text{C}/\text{decade}$) in TM, TMAX and TMIN of winter and spring temperature series significant at 95% confidence level.	78
3.17	Result of MK-test in TM, TMAX and TMIN of winter and spring temperature series significant at 95% confidence level.	79
3.18	The percentage of stations with significant trends in summer TM.	81
3.19	The percentage of stations with significant trends in summer TMAX.	82
3.20	The percentage of stations with significant trends in summer TMIN.	83

3.21	The percentage of stations with significant trends in autumn TM.	84
3.22	The percentage of stations with significant trends in autumn TMAX.	85
3.23	The percentage of stations with significant trends in autumn TMIN.	86
3.24	Trends ($^{\circ}\text{C}/\text{decade}$) in TM, TMAX and TMIN of summer and autumn temperature series significant at 95% confidence level.	87
3.25	Result of MK-test in TM, TMAX and TMIN of summer and autumn temperature series significant at 95% confidence level.	88
3.26	The percentage of stations with significant trends in December TM.	89
3.27	The percentage of stations with significant trends in December TMAX.	90
3.28	Fig. 3.28: The percentage of stations with significant trends in December TMIN.	91
3.29	Trends ($^{\circ}\text{C}/\text{decade}$) in TM, TMAX and TMIN of December temperature series significant at 95% confidence level.	91
3.30	Result of MK-test in TM, TMAX and TMIN of December temperature series significant at 95% confidence level.	92
3.31	The percentage of stations with significant trends in January TM.	93
3.32	The percentage of stations with significant trends in January TMAX.	94
3.33	The percentage of stations with significant trends in January TMIN.	95
3.34	The percentage of stations with significant trends in February TM.	96

3.35	The percentage of stations with significant trends in February TMAX.	97
3.36	Trends ($^{\circ}\text{C}/\text{decade}$) in TM, TMAX and TMIN of January and February temperature series significant at 95% confidence level.	98
3.37	Result of MK-test in TM, TMAX and TMIN of January and February temperature series significant at 95% confidence level.	99
3.38	The percentage of stations with significant trends in February TMIN.	100
3.39	The percentage of stations with significant trends in March TM.	101
3.40	The percentage of stations with significant trends in March TMAX.	102
3.41	The percentage of stations with significant trends in March TMIN.	103
3.42	The percentage of stations with significant trends in April TM.	104
3.43	The percentage of stations with significant trends in April TMAX.	105
3.44	The percentage of stations with significant trends in April TMIN.	106
3.45	Trends ($^{\circ}\text{C}/\text{decade}$) in TM, TMAX and TMIN of March and April temperature series significant at 95% confidence level.	107
3.46	Result of MK-test in TM, TMAX and TMIN of March and April temperature series significant at 95% confidence level.	108
3.47	Observed average monthly and seasonal temperature ($^{\circ}\text{C}$) simulated by the 4 models for the period 1981-2000.	109
3.48	Temperature changes ($^{\circ}\text{C}$) for different seasons in the study area by 4 models (B1 and A1B Scenarios) for the period	110

	1981-2100.	
3.49	Projections for annual mean temperature by 4 models.	111
3.50	Projections for winter mean temperature by 4 models.	112
3.51	Projections for spring mean temperature by 4 models.	112
3.52	Projections for summer mean temperature by 4 models.	113
3.53	Projections for autumn mean temperature by 4 models.	114
3.54	Temperature changes ($^{\circ}\text{C}$) for different months in the study area by 4 models (B1 and A1B Scenarios) for the period 1981-2100.	114
3.55	Projections for December mean temperature by 4 models.	115
3.56	Projections for January mean temperature by 4 models.	116
3.57	Projections for February mean temperature by 4 models.	117
3.58	Projections for March mean temperature by 4 models.	118
3.59	Projections for April mean temperature by 4 models.	131
4.1	Location of the precipitation stations.	133
4.2	Annual and seasonal CV (%) Zones.	136
4.3	The percentage of stations with significant trends and change point by the linear regression, MK-test and Sequential Mann-Kendall test for annual and seasonal precipitation series.	137
4.4	Graphical representation of sequential values of the statistics forward series $u(t)$ and backward series $u'(t)$ obtained by SQ-MK test for annual precipitation series observed at Abadan station.	138
4.5	Trends (mm/decade) in annual and seasonal precipitation series significant at 95% confidence level.	139
4.7	The percentage of stations with significant trends and change point at 95% confidence level by the linear regression, MK-test and Sequential Mann-Kendall test for snow cover observed period precipitation series.	142
4.8	Trends (mm/decade) in monthly precipitation series	143

significant at 95% confidence level.

4.9	Result of MK-test monthly precipitation series significant at 95% confidence level.	144
4.10	The average of observe data (monthly, seasonally) and simulated by the 4 models from 1981-2000.	145
4.11	Projections for annual mean precipitation by 4 models.	146
4.12	Projections for winter mean precipitation by 4 models.	147
4.13	Projections for spring mean precipitation by 4 models.	148
4.14	Projections for summer mean precipitation by 4 models.	148
4.15	Projections for autumn mean precipitation by 4 models.	149
4.16	Projections for December mean precipitation by 4 models.	150
4.17	Projections for January mean precipitation by 4 models.	151
4.18	Projections for February mean precipitation by 4 models.	152
4.19	Projections for March mean precipitation by 4 models.	152
4.20	Projections for April mean precipitation by 4 models.	153
5.1	Sequential values of the statistics forward trend $u(t)$ (solid line) and backward trend $u'(t)$ (dashed line) from the Mann-Kendall test.	165
5.2	Linear regression of snow covers for different months of snow cover period.	165
5.3	Area under snow covers in December.	166
5.4	Area under snow covers in January.	167
5.5	Area under snow covers in February.	168
5.6	Area under snow covers in March.	169
5.7	Area under snow covers in April.	170
5.8	Month wise correlation between snow cover and Persian Gulf surfer temperature and Mediterranean Sea (SST).	171
5.9	Month wise correlation between snow cover area and Southern Oscillation Index.	173
5.10	Month Wise correlation between snow cover area and	173

	Oceanic Niño Index.	
5.11	Month wise correlation between snow cover area and North Atlantic oscillation.	174
5.12	Month Wise correlation between snow cover area and Extreme Eastern Tropical Pacific SST.	175
5.13	Month wise correlation between snow cover area and Eastern Tropical Pacific SST.	175
5.14	Month Wise correlation between snow cover area and East Central Tropical Pacific SST.	176
5.15	Month Wise correlation between snow cover area and Central Tropical Pacific SST.	176
5.16	Projections for December snow cover by 4 models.	178
5.17	Changes in snow cover area from 1981-2000 to 2081-2100 in December under B1 scenario.	179
5.18	Changes in snow cover area from 1981-2000 to 2081-2100 in December under A1B1 scenario.	179
5.19	Projections for January snow cover by 4 models.	181
5.20	Changes in snow cover area from 1981-2000 to 2081-2100 in January under B1 scenario.	181
5.21	Changes in snow cover area from 1981-2000 to 2081-2100 in January under A1B scenario.	182
5.22	Projections for February snow cover by 4 models.	183
5.23	Changes in snow cover area from 1981-2000 to 2081-2100 in February under B1 scenario.	184
5.24	Changes in snow cover area from 1981-2000 to 2081-2100 in February under A1B scenario.	184
5.25	Projections for March snow cover by 4 models.	186
5.26	Changes in snow cover area from 1981-2000 to 2081-2100 March under B1 scenario.	186
5.27	Changes in snow cover area from 1981-2000 to 2081-2100 March under A1B scenario.	187
5.28	Projections for April snow cover by 4 models.	188

5.29	Changes in snow cover area from 1981-2000 to 2081-2100 in April under B1 scenario.	189
5.30	Changes in snow cover area from 1981-2000 to 2081-2100 in April under A1B scenario.	189
