

# Acknowledgements

The culmination of a process that started in January 2005 in the form of this thesis has been wonderful experience. I had the opportunity to being exposed to a myraid of cultures around the world in pursuit of this thesis. First of all, I would like to acknowledge Prof. Ramprasad Sengupta for his contribution. He helped me in setting the agenda of my research from the beginning, and his rigorous examination of the results of the models were very crucial in fixing problems.

Dr. Joel Ruet has always been interested in my research since my MPhil days. My association with him has been full of learning. The idea of looking at the energy sector from a development perspective emerged during our discussions.

I am really thankful to the European Union funded Asia Link Project on Law and Economics for providing me an opportunity to spend 20 months in Europe. My initial days in Europe were at the Centre for Advanced Studies in Law and Economics (CASLE), Gent University, Belgium. At CASLE, I had the opportunity to interact with Prof. Boudewijn Bouckaert and prof. Ben Depoorter. Their courses in law and economics, as well as personal interactions with them were quite enriching. During my stay at CASLE, Nancy Van Duffel had to tolerate my stupid queries about Belgian society.

I moved to the Center for Operation Research and Econometrics (CORE), Université Catholique de Lovain (UCL), Lovain La Neuve, Belgium to work with Prof Yves Smeers. He introduced me to the use of mathematical programming for analysing the liberalised electricity market. A small group of PhD students working on energy issues comprising Gauthier, Gregor, Mathias, Giorgia, Olivier and Joachim were more than forthcoming to help me out in my problems, of course with humorous attitude. I would like to thank them all. At CORE I had the unique opportunity to interact with Prof Jacques Derez. His simple and witty ideas will always remain an asset throughout my academic career. I also benefitted from attending lectures and seminars by Prof. François Maniquet, Jean-François Mertens, Claude D'aspromont.

My interaction on issues ranging from intricate mathematics to religion, particularly during late nights with Peter, Rafael, Jean-Sébastien, and Santanu will be an unforgettable experience. Caralotta with whom I shared office space at CORE made sure that I did not feel lonely. Efficient secretarial staff at CORE was always a delight. Cathrine's struggle with UCL administrative staff to get me in the CORE was a pleasant surprise to me. Laurent Buset and Guy Louis were of great help when it came to computer related issues.

I am really indebted to Prof. Bouckaert of CASLE for allowing me to shift to CORE as it was not a participating institute under this fellowship Programme, and at the same time he made sure that I have access to the infrastructure of Gent

University. He showed keen interest in my research topics and instilled confidence in my abilities for successfully conducting independent research.

My interactions with prof Gert Burnekreft of Beremer Energy Institute, Germany and Laurens De Vries of TU Delft, Netherlands were quite useful. In addition to this I had useful discussions on the issues of Indian electricity reforms with prof Paul Joskow, Jean Tirole, Jean-Michel Glachant and Karsten Neuhoff at a conference in London organised by Electricity Policy Research group of Cambridge University.

At JNU I am indebted to Prof. Anjan Mukherjee, Prof. Krishnendu, Dr. Subrata Guha, Dr. Rajendra Kundu, Dr. Jaivir Singh and Mr Somit for being supportive and raising critical questions during my seminars. Due to Somit's considerable experience in the power sector, I could test many of my ideas on incentive issues in the regulation of the power sector.

Ms Katherine Walker, at the office of Asian Link Project on Law and Economics at Hamburg University, even after being far away, was managing every affair of my stay in Europe as if she was just sitting next to my office. She was brilliant.

Nesar, Zahira and their daughter (Hiba) at Mahanadi hostel provided me a homely environment and regular breaks from my mess food. My pals at JNU Abdi, Rafi, Asghar, Faiz, Sandeep, Dheeraj, Saravan, Abbas, Siddik, Anjum, Mobeen and Francis ensured every kind of help including proof reading of the thesis chapters. I would specially thank Rafi for giving me company while picking up LaTeX for writing the thesis. Abdi was perfect company for discussing issues of general interest during *Chai* sessions at Parmod's Dhaba.

Living in Europe, that too in a small place like Lovian la Neuve became found memory of my life because of Didier, Celine and Mathew. We had innumerable dinner, tea sessions and holidays. Ashfaque and Shamim were perfect company when it came to cooking Indian curries. I am thankful to a group people, that I used to meet regularly at the Mosque, for giving me company during my loneliness. They introduced me to delicious Arab food.

Shiela ma'm will remain a constant source of my peace and clamness. She is a smooth talker and listens to problems.

Moral support of Charmaine and her family all along the thesis kept me away from depressing moments. No word of thanks will be enough for Charmaine's unconditional support throughout my academic pursuit and her support to my parents when I was not in position to help them. She has been a wonderful company even though she stays far away.

My brother Zulki and my sisters Lucy, Naushaba, and Soghra are adorable. Their love and respect for me is unmatchable. They missed me a lot during my thesis. I wish to compensate for that after the submission of this thesis. Hard work of my uncle and endless sacrifices of my parents have been the most important source of inspiration. It is because of them that I am here to submit this thesis. Their confidence in me stimulates me to work hard. Finally, but most importantly, I would like thank *Allah* (God) for everything in my life.
