

List of Tables

2.1	Share of fuels in projected primary energy requirements assuming GDP growth of 8 Percent annually (in %)	12
2.2	Energy Use Elasticity w.r.t. GDP (Percent change in Commercial energy use for one percent change in GDP) Regression Using India's Time Series	12
2.3	Sectoral growth rates of real GDP (1999-2000 prices) (in %)	13
2.4	Fuel wise distribution of residential sector's final demand for energy for 2005 (MTOE)	16
2.5	GDP per capita in the US\$ for the year 2005	17
2.6	Spearman's Rank Correlation of \bar{X}_i and \bar{Z}_i for cooking and lighting rural and urban areas	28
2.7	Number of persons undernourished (in million)	31
2.8	Potential and installed capacity of renewable sources	32
2.9	Per capita CO ₂ Emissions (tonnes per person per year)	36
2.10	Cumulative CO ₂ emissions, 1900 to 2002	37
3.1	Proven Reserves of Coal in Indian states as on 1st April, 2008 (in million tonnes)	52
3.2	Production of coal (in million tonnes)	53
3.3	Ownership and end use wise Distribution of captive coal blocks since 1993 (in Numbers)	55
3.4	Type of coal reserves in India as on 1st April 2006 (in million tonnes)	56
3.5	Prime mover wise crude oil and natural gas production in 2007 (in MTOE)	60
3.6	Industry-wise Off-take of Natural Gas in India (in %)	63

3.7	Growth of energy supply and electricity during 1980-81 to 2004-2005	64
3.8	Fuel wise installed capacity of Non-Utilities as on 31.02.05	66
3.9	Profitability of alternative strategies to bridge the energy gap (%) . .	68
4.1	Capital Costs of the CCGT Projects (between April 1994 to April 2000)	107
5.1	Load pattern of India for each month for 2005-06 (in MW)	124
5.2	Short run marginal cost of meeting the demand levels given in Table 5.1[Rs/MWh]	130
6.1	Elasticities of income and price for electricity demand by different studies	135
6.2	Load pattern of India for each month for 2005-06	147
6.3	Load pattern of Orissa for each month for 2005-06	148
6.4	Generation of gas and coal plants under different regulated tariff of Orissa	153
6.5	Impact of \bar{P}_{WB} on \bar{Z}_{OR} met for a given level of \bar{P}_{OR} =Rs 1100/MWh . . .	153
7.1	Assumptions about load and their duration	166
7.2	Assumptions regarding costs of new technology	167
7.3	LRMC of meeting different load scenarios	167
A-1	Coverision efficiency of fuels used for cooking (%)	208
A-2	Major source of lighting for rural households of different socio- economic classes in 2004-05 (out of 1000 households)	208
A-3	Major source of lighting for urban households of different socio- economic classes in 2004-05 (out of 1000 households)	209
A-4	Major source of cooking for rural households of different socio- economic classes in 2004-05 (out of 1000 households)	209
A-5	Major source of cooking for urban households of different socio- economic classes in 2004-05 (out of 1000 households)	210

A-6	MPCE ^a class wise access to MES ^b for cooking in rural areas in 2003-04 (in %)	211
A-7	MPCE ^a class wise access to MES ^b for cooking in urban areas in 2003-04 (in %)	212
A-8	MPCE ^a class wise access to MES ^b for lighting in rural areas in 2003-04 (in %)	213
A-9	MPCE ^a class wise access to MES ^b for lighting in urban areas in 2003-04 (in %)	214
A-10	Per capita net state domestic product (NSDP) and status of electrification of households, villages in 2001 (%)	215
A-11	Details of the thermal plants and their operating margins as predicted by the model in chapter 5	216
A-12	Average (\bar{X}_i) and inequality adjusted average (\bar{Z}_i) level of access to MES for cooking and lighting rural and urban areas	223
