

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
<b>2</b>	<b>Definitions and notation</b>	<b>17</b>
2.1	Choice sets and choice functions . . . . .	17
2.2	Binary relation . . . . .	18
2.3	Derivation of $k$ -th best element . . . . .	19
2.4	$k$ -Rationalizability of a choice function . . . . .	20
2.5	A derived binary relation $R_2$ . . . . .	22
2.6	Order of a set . . . . .	24
<b>3</b>	<b>2nd best element rationalization with full domain</b>	<b>26</b>
3.1	Introduction . . . . .	26
3.2	Axioms . . . . .	26
3.3	2-Rationalization . . . . .	27
3.3.1	Necessary and sufficient condition for a choice function to be 2-rationalizable by a reflexive, connected and acyclic binary relation . . . . .	27
3.3.2	Necessary and sufficient condition for a choice function to be 2-rationalizable by an ordering . . . . .	32
3.4	Independence of the axioms . . . . .	33
<b>4</b>	<b>2nd best element rationalization with general domain</b>	<b>35</b>
4.1	Introduction . . . . .	35
4.2	Notation and Definitions . . . . .	35

4.3	Necessary and sufficient condition for a choice function to be 2-rationalizable by an ordering . . . . .	37
<b>5</b>	<b><i>k</i>-th best element rationalization with full domain</b>	<b>40</b>
5.1	Introduction . . . . .	40
5.2	Axioms . . . . .	40
5.3	<i>k</i> -Rationalization . . . . .	42
5.3.1	Necessary and sufficient condition for a choice function to be <i>k</i> -rationalizable by an ordering . . . . .	42
5.3.2	Necessary and sufficient condition for a choice func- tion to be <i>k</i> -rationalizable by a reflexive, connected and acyclic binary relation . . . . .	53
5.4	Independence of the axioms . . . . .	56
<b>6</b>	<b>Conclusion</b>	<b>58</b>
