List of Tables

2.1 Past reviewed articles on ICT in Hospitality Industry ......................................................8
2.2 Prominent studies on Perception for Technology Adoption in Hospitality Organizations .................................................................10
2.3 Prominent technology adoption models .............................................................................13
3.1 Summary of Hypotheses .................................................................................................25
4.1 Questionnaire developed based on the constructs from the literature study ....31
4.2 KMO and Bartlett’s Test ............................................................................................33
4.3 Reliability Statistics .....................................................................................................33
4.4 Overall data analysis in the research study .................................................................36
4.5 Recommended values of goodness of fit of the measurement model ................37
5.1 Age wise Distribution of the Respondents .................................................................39
5.2 Grade wise Distribution of the Respondents ..................................................................40
5.3 Education wise Distribution of the Respondents .........................................................41
5.4 Job Experience wise Distribution of the Respondents ................................................41
5.5 Gender wise Distribution of the Respondents .............................................................42
5.6 Descriptive Statistics of SCALE Parameters ................................................................43
5.7 Reliability Analysis with Cronbach’s Alpha ................................................................46
5.8 Regression Weights (Relative Advantage) .................................................................48
5.9 Model Fit Summary of Relative Advantage ................................................................48
5.10 Regression Weights (Complexity) ................................................................................49
5.11 Model Fit Summary of Complexity ............................................................................49
5.12 Regression Weights (Compatibility) ...........................................................................50
5.13 Model Fit Summary of Compatibility ........................................................................50
5.14 Regression Weights (Upper Management Support) ...............................................51
5.15 Model Fit Summary of Upper Management Support ..............................................51
5.16 Regression Weights (Training and Education) .........................................................52
5.17 Model Fit Summary of Training and Education .......................................................52
5.18 Regression Weights (Technological Competence) ................................................. 53
5.19 Model Fit Summary of Technological Competence............................................. 53
5.20 Regression Weights (Competitive Pressure) ....................................................... 54
5.21 Model Fit Summary of Competitive Pressure..................................................... 54
5.22 Regression Weights (Trading Partner Support) .................................................... 55
5.23 Model Fit Summary of Trading Partner Support .................................................. 55
5.24 Regression Weights (Perceived Usefulness) ....................................................... 56
5.25 Model Fit Summary of Perceived Usefulness ...................................................... 56
5.26 Regression Weights (Perceived Ease of Use) ..................................................... 57
5.27 Model Fit Summary of Perceived Ease of Use .................................................... 57
5.28 Regression Weights (Attitude Towards Using) .................................................... 58
5.29 Model Fit Summary of Attitude Towards Using .................................................. 58
5.30 Convergent Validity with Composite Reliability and Average Variance Extracted. 59
5.31 Regression Weights (TAM – TOE Integrated Model) ........................................... 62
5.32 Model Fit Summary of TAM – TOE Integrated Model ........................................ 64
5.33 Regression Weights (Modified TAM – TOE Integrated Model) ............................ 67
5.34 Model Fit Summary of Modified TAM – TOE Integrated Model .......................... 68
5.35 Standardized Regression Weights (Modified TAM – TOE Integrated Model) ........ 69
5.36 Squared Multiple Correlations Coefficient of Modified TAM – TOE Integrated Model........................................................................................................ 70
5.37 Mediation effects in the Modified TAM – TOE Integrated Model ....................... 71
5.38 Direct effects in the Modified TAM – TOE Integrated Model ............................. 73
5.39 Indirect effects in the Modified TAM – TOE Integrated Model ........................... 75
5.40 Total effects in the Modified TAM – TOE Integrated Model ............................... 76
5.41 Summary of hypothesis tests ............................................................................... 77
