1	Introduction	1
1.1	General Introduction.	1
1.2	Preliminaries	5
1.2.1	Taxicab Number [35], [66]	8
1.3	Structure of the Thesis	10
1.3.1	Chapterwise Overview.	10
2	Pythagorean Triples	14
2.1	Introduction.	14
2.1.1	Primitive Pythagorean Triples.	18
2.1.2	Rational Points on the Unit Circle and Pythagorean Triples.	23
2.1.3	Representing Pythagorean triples as Gopal-Hemachandra Numbers.	25
2.1.4	New Pythagorean Triple Algorithm.	27
2.2	Some Properties of Pythagorean Triples [62].	28
2.3	Congruent Numbers.	32
2.3.1	Elliptic Curves from Congruent Numbers.	35
3	Triples and Sum of Its Two Coordinates	37
3.1	Introduction.	37
3.2	For determination of distinct $a, b, c \in \mathbb{N}$ with $n \geq 2$, such that $a+b, a+c, b+c$ are n th power of positive integers.	38
3.3	For $n = 2$	39

3.3.1	Determination of a triplet (a, b, c) of distinct positive integers such that $ a - b , a - c , b - c $ are perfect squares.	39
3.3.2	Determination of a triplet (a, b, c) of distinct positive integers such that $a + b, a + c, b + c$ are perfect squares.	40
3.3.3	Other Triplets by Using a Triplet.	43
3.3.4	Determination of Triplets from Four Tuples.	44
3.4	For $n = 3$	46
3.4.1	Choice $s = r + 1$ and $r + 1 < t$ where r is odd.	47
3.4.2	Choice $s = r + 1$ and $r + 1 < t$ where r is even.	49
3.4.3	Choice $s = r + 2$ and $r + 2 < t$ where r is odd.	51
3.5	For $n = 4$	54
3.5.1	Choice $s = r + 1$ and $r + 1 < t$ where r is odd.	54
3.5.2	Choice $s = r + 1$ and $r + 1 < t$ where r is even.	57
3.6	For determination of distinct $a, b, c, d \in \mathbb{Z}$, such that $a + b, a + c, b + c, a + d, b + d, c + d$ are cube of positive integers.	59
3.6.1	Main Result.	61
3.7	Conclusions.	65
4	On Finite Sum of Polynomial Expressions	68
4.1	Introduction.	68
4.2	Integral Technique.	69
4.2.1	Determination of $\sum n^p$ for $p = 1, 2, 3, \dots$	70
4.2.2	Determination of $\sum g(n)$ when $g(n)$ is a polynomial.	73
4.3	Differentiation Technique.	74
4.4	Forward Difference Technique.	76
4.4.1	To find $1 + 2 + 3 + \dots + n = f(n)$, Quadratic in n :	77
4.4.2	To find $1^2 + 2^2 + 3^2 + \dots + n^2 = f(n)$, third degree polynomial in n	77
4.4.3	To find $1^3 + 2^3 + 3^3 + \dots + n^3 = f(n)$, fourth degree polynomial in n	78

4.4.4	To find $1^4 + 2^4 + 3^4 + \cdots + n^4 = f(n)$, fifth degree polynomial in n	78
4.4.5	To find $1^5 + 2^5 + 3^5 + \cdots + n^5 = f(n)$, sixth degree polynomial in n	79
5	Triangular Numbers	81
5.1	Introduction	81
5.2	Elementary Properties of Triangular Numbers (t_n).	82
5.3	Further Properties of Triangular Numbers t_n	86
6	On Primality and Pseudoprimes	93
6.1	Pseudoprimes to a Base.	93
6.2	Absolute Pseudoprimes (Carmichael Numbers).	100
6.3	Strong Pseudoprime to a base.	107
6.4	Euler Pseudoprime.	112
