

## TABLE OF CONTENTS

CHAPTER	TITLE	PAGE NO.
	TITLE	iii
	CERTIFICATE	<u>iv</u>
	DECLARATION	<u>v</u>
	ACKNOWLEDGEMENTS	<u>vi</u>
	ABSTRACT	<u>viii</u>
	TABLE OF CONTENTS	<u>xi</u>
	LIST OF TABLES	<u>xvi</u>
	LIST OF FIGURES	<u>xx</u>
	LIST OF SYMBOLS	<u>xxiv</u>
1.0	INTRODUCTION	1
1	1. Motivation	1
1.2	Dynamic Stability	3
1.3	Geometric Nonlinearity	4
1.4	Scope of the Present Study	5
1.5	Organization of Thesis	7
2.0	LITERATURE REVIEW	10
2.1	Stability and frequency analysis of structural members	11
2.2	Dynamic stability behavior of beams	13
2.3	Dynamic stability of beams resting on elastic foundation	15
2.4	Stability and vibration analysis of initially stressed structural members	23
2.5	Dynamic stability of structural members like plates and shells.	26
2.6	Nonlinear Dynamic stability behavior of structural members	27

CHAPTER	TITLE	PAGE NO.
<b>3.0</b>	<b>DYNAMIC STABILITY OF BEAMS AND PLATES</b>	<b>31</b>
3.1	General Formula to Predict Dynamic Stability of Beams Subjected to Axial Periodic Loads	31
3.1.1	Introduction	31
3.1.2	Formulation	34
	3.1.2.1 Simply Supported Beam	41
3.1.3	Numerical Results and Discussion	43
3.2	Dynamic stability of beams on one parameter (Winkler model) elastic foundation	46
3.2.1	Formulation	48
	3.2.1.1 Evaluation of Transition Foundation	51
3.2.2	Numerical Results and Discussion	54
3.3	Dynamic stability of beams on two parameter (Pasternak model) elastic foundation	58
3.3.1	Dynamic Stability Equation	61
	3.3.1.1 Evaluation of buckling load and frequency parameters	63
	3.3.1.2 Transition values of the foundation parameter	65
	3.3.1.3 Variation of $\lambda_b$ and $\lambda_f$ for different Values of $m_b$ and $m_f$ .	66
3.3.2	Concise form of dynamic stability formulas	67
	3.3.2.1 General dynamic stability formula	70
3.3.3	Numerical Results and Discussion	71
3.4	Dynamic stability of beams subjected to end periodic and static Tensile axial loads	75

<b>CHAPTER</b>	<b>TITLE</b>	<b>PAGE NO.</b>
3.4.1	Formulation	75
	3.4.1.1 Simply supported beam	77
	3.4.1.2 Clamped beam	79
	3.4.1.3 Cantilever beam(C-F)	80
	3.4.1.4 Clamped- hinged beam	81
3.4.2	Numerical Results and Discussion	83
3.5	Dynamic stability of tapered beams subjected to end concentrated axial periodic loads	85
3.5.1	Dynamic stability formula	86
3.5.2	Numerical Results and Discussion	90
3.6	Dynamic stability of square plate subjected to a combination of constant and periodic loads	91
3.6.1	Formulation	92
3.6.2	Numerical Results and Discussion	96
3.7	Concluding Remarks	98
4.0	NATURAL FREQUENCIES OF INITIALLY LOADED STRUCTURAL MEMBERS	130
4.1	Development of Master Formula	133
4.2	Discussion on Master Formula	138
4.3	Numerical Results and Discussion	139
4.4	Examples for Higher Modes of Vibration	145
4.5	Concluding Remarks	147
5.0	DYNAMIC STABILITY OF STRUCTURAL MEMBERS	153
5.1	Development of Master dynamic stability formula for structural members	153
5.1.1	Formulation	156
5.1.2	Numerical Results and Discussion	158

<b>CHAPTER</b>	<b>TITLE</b>	<b>PAGE NO.</b>
5.2	Alternate master dynamic stability formulas	164
	5.2.1 Master Dynamic Stability Formulas (MDSFs)	165
	5.2.1.1 MDSF I	165
	5.2.1.2 MDSF II	165
	5.2.1.3 MDSF III	167
	5.2.2 Numerical Results and Discussion	169
5.3	Concept of Master dynamic stability point	172
	5.3.1 Formulation	174
	5.3.2 Numerical Results and Discussion	176
5.4	Concluding Remarks	178
6.0	GEOMETRICALLY NONLINEAR DYNAMIC INSTABILITY OF BEAMS	186
6.1	Formulation	187
6.2	Numerical Results and Discussion	192
	6.2.1 Validation of master GNDI formula for non-zero values of $\alpha$	196
6.3	Concluding Remarks	202
	Overall Conclusions	207
	Further scope of work	210
	References	212
	Publications related to Present Work	232
