

## LIST OF TABLE

Table 2.1	Summary of DWT designs proposed in technical literature	22
Table 3.1	General comparison of hardware and time complexities	46
Table 3.2	Hardware and time complexities of the proposed structure	47
Table 3.3	Proposed structure using Radix-4 Booth multiplier	48
Table 4.1	Radix-4 Booth encoding	53
Table 4.2	Control signal for symmetric and anti-symmetric product	56
Table 4.3	Radix-8 Booth encoding	59
Table 4.4	Control signals of direct Booth encoding and SAPC encoding	61
Table 4.5	SAPC Encoding	61
Table 4.6	Comparison of hardware and time complexities	63
Table 4.7	Hardware and time complexities of booth based on SAPC	64
Table 4.8	Comparison of logic complexity of MUX	66
Table 4.9	Radix-8 Booth encoding using modified control function	70
Table 4.10	Hardware and time complexities of Booth Multiplier	75
Table 4.11	Synthesis results of Booth multiplier for different bit-width	76
Table 5.1	Hardware and time complexities of constant/fixed-width	84
Table 5.2	Synthesis result of full-width constant Booth multiplier designs	85
Table 5.3	Synthesis result of generic constant fixed-width	86
Table 5.4	Proposed 2-D DWT structure for data blocks $\{(P/2) \times 2\}$	95
Table 5.5	Proposed structure using Radix-8 Booth multiplier	96
Table 6.1	LUT table (8-words) of lifting constant $\alpha$ and $\beta$	107

Table 6.2	LUT table for 12-bit multiplication of lifting constant $\gamma$ and $\delta$	108
Table 6.3	LUT table (8-words) of scaling constants $K^2$ and $(1/K^2)$ Value	108
Table 6.4	LUT table (4-words) of lifting constant $\alpha$ value and $\beta$ value	108
Table 6.5	LUT table (4-words) of lifting constant $\gamma$ value and $\delta$ value	109
Table 6.6	LUT table (8-words) for scaling constants $k^2$ and $(1/k^2)$ value	109
Table 6.7	Comparison of synthesis result of structures	110
