ACKNOWLEDGEMENTS

My heart echoes with the feelings of gratitude and affection to my research supervisor Dr. H. Sudarsana Rao, Professor of Civil Engineering, JNTU College of Engineering, Anantapur, for his invaluable guidance and constant encouragement he has given to me during my research. I am greatly indebted to him for sparing his valuable time for fruitful discussions and offering constructive comments during the progress of this work.

I am highly grateful to Dr. C.S. Reddy, Former Principal, KSRM College of Engineering, Kadapa for his greater advice to pursue Ph.D and his constant inspiration and encouragement during the progress of the research.

I owe my sincere thanks to Dr.V.Bhaskar Desai, Head, Department of Civil Engg., JNTUCEA for providing facilities during the study of my research. My special thanks are due to all the staff in the Department of Civil Engineering, JNTUCEA.

My gratitude becomes all the more great when I mention Sri K. Sivananda Reddy, Correspondent, KSRM College of Engineering, who has been constantly advising to pursue higher studies. I feel myself privileged and lucky to be one among the faculty in his college.

I express my sincere gratitude to Prof. K.S.N. Reddy, Principal, KSRM College of Engineering, Kadapa for his unending support and cooperation given to me. It would not have been possible for me to submit this thesis in the absence of his cooperation.

My special thanks to the staff of Civil Engineering Department, KSRM College of Engineering, Kadapa for their probe and constant encouragement given to me.
My heart echoes with love and affection for my wife Smt. B Aruna for her patient attending to the duties, inspite of having too many irons in the fire. My special praise for her for bearing with the demanding schedule of my work and keeping ideal atmosphere at home. I draw inspiration from My children Chi. B.Gautam Kishore Reddy and Chi. B. Sree Durga for their sweet and innocent words of probe coupled with dreaming smiles.

Only due to constant encouragement from Parents, it has been possible for the author to work in the field of Engineering rather than Agriculture. I am greatly indebted to them for doing things for me, they only could have done. My heartfelt thanks goes to my brother Sri B. Dasaratharami Reddy and Sister Smt. N. Rama Devi, for keeping my spirits high during the course of work that ultimately translated into a successful completion of the research undertaken.

I would like to thank one and all who have helped me directly or indirectly in the preparation and submission of this thesis.

B. JAYARAMI REDDY.
