CHAPTER I

Biodegradable Polyester polyol acrylates for Tissue Sealant Applications

Section 1: A Review on Tissue Sealants

1.1	Introduction	1
1.2	Trends in Biomaterials Research and Development	4
1.3	Tissue Sealants	6
1.4	Scope and Objectives of present work	35
	References	38

Section 2: Experimental

2.1	Materials	44
2.2	Synthesis of polyester polyols	44
2.3	¹ H NMR of polyester polyols	45
2.4	FTIR of polyester polyols	47
2.5	Determination of Acid value	47
2.6	Determination of Hydroxyl value	48
2.7	Viscosity of polyester polyols	50
2.8	Synthesis of polyester polyol acrylates	51
2.9	¹ H NMR of polyester polyol acrylates	51
2.10	FTIR of polyester polyol acrylates	52
2.11	Photopolymerization	52
2.12	Determination of Gel content	53

2.13	Water equilibrium swell	53
2.14	Hydrolytic degradation	53
2.15	Hydrolytic and Enzymatic degradation	54
2.16	Tensile strength and elongation at break	54
2.17	Dynamic Mechanical and Thermal Analysis	55
2.18	Determination of Cross link Density	55
2.19	In vitro Burst test	55
2.20	Contact angle measurement	56
2.21	In vitro Sulfamethoxazole delivery	56
2.22	Biocompatibility Studies	58
Section 3: Results and Discussion		
3.1	Introduction	63
Section 3A: Effect of Internal Branching as well as External cross linking on Macromer properties		68
Section 3B: Effect of PEG chain length and a monofunctional reactive diluent, N-Vinyl pyrrolidinone (NVP) on Macromer properties		77
Section 3C: Effect of Choice of Acid and Diol on Macromer properties		95
Section 3D: Biocompatibility of UV cured polyester polyol acrylates		116
References		129

CHAPTER II

Biodegradable Polyester polyol polymers for Controlled Drug Release Applications

Section 1: Introduction to Controlled Release Drug Delivery Systems		
1.1	Introduction	132
1.2	Necessity of Drug Delivery Systems	135
1.3	Classification of Rate Controlled Drug Delivery Systems	136
1.4	Advantages of Controlled Release Drug Delivery Systems	155
1.5	Physical forms of Controlled Release Devices	156
1.6	Scope and Objectives of present work	156
References		161

Section 2: Hydrophobically graded polyester polyol acrylate polymers:

**Synthesis, characterization and microencapsulation of
Sulfamethoxazole for Controlled release application**

Section 2A: Experimental

2A.1	Materials	166
2A.2	Synthesis of polyester polyols	166
2A.3	¹ H NMR of polyester polyols	167
2A.4	FTIR of polyester polyols	168
2A.5	Determination of Acid value	168
2A.6	Determination of Hydroxyl value	168
2A.7	Synthesis of polyester polyol acrylates	168
2A.8	¹ H NMR of polyester polyol acrylates	168
2A.9	FTIR of polyester polyol acrylates	169
2A.10	UV Polymerization for preparation of films for determination of water contact angles	169
2A.11	Contact angle measurement	170
2A.12	Preparation of microspheres	170
2A.13	Characterization of microspheres	
2A.13.1.	Microscopic studies of microspheres	171
2A.13.2.	Determination of equilibrium swelling in water	171
2A.13.3.	Determination of in vitro degradation times	172
2A.13.4.	Microencapsulation efficiency of Sulfamethoxazole	172
2A.13.5.	Study of in vitro release of Sulfamethoxazole	172

Section 2B: Results and Discussion 174

References 192

Section 3: UV Curable polyester polyol acrylate Nanocomposites: Synthesis, characterization and Controlled release application

Section 3A: Introduction to Nanocomposites

3A.1.	Introduction	193
3A.2.	Structure and properties of layered silicates	193

3A.3. Structure and properties of organically modified layered silicates (OMLS)	195
3A.4. Types of nanocomposites	196
3A.5. Nanocomposite preparation	198
3A.6. Scope and Objectives of present work	200
Section 3B: Experimental	
3B.1. Materials	204
3B.2. Synthesis of polyester polyols and acrylates	204
3B.3. Preparation of Organo bentonite	205
3B.4. Characterization of organo bentonite clay (OBNT)	
3B.4.1. X-ray diffraction analysis	205
3B.4.2. FTIR analysis	205
3B.5. Synthesis of polyester polyol acrylate nanocomposites	206
3B.6. Photopolymerization	207
3B.7. Characterisation of nanocomposites	
3B.7.1. X-ray diffraction analysis [XRD]	207
3B.7.2. Transmission electron microscopy [TEM]	208
3B.7.3. Determination of Gel content	208
3B.7.4. Water equilibrium swell	208
3B.7.5. Tensile strength and elongation at break	209
3B.7.6. Hydrolytic degradation	209
3B.7.7. Study of in vitro drug release	209
Section 3C: Results and Discussion	213
