Chapter 1
INTRODUCTION ................................................................. 01 - 09

Chapter 2
REVIEW OF LITERATURE ...................................................... 11 - 36
2.1 Street food vending – An overview ................................ 11
2.2 Quality characteristics of street foods ............................. 24
  2.2.1 Nutrient composition and contribution to diet .......... 24
  2.2.2 Adulterants in street vended foods ............................ 25
  2.2.3 Microbiological quality of street vended foods ...... 27
2.3 HACCP as a food safety management system .................. 32
2.4 Food safety education for street food vendors ................... 34

Chapter 3
METHODOLOGY ................................................................. 37 - 58
3.1 Selection of area .............................................................. 38
3.2 Selection of sample ......................................................... 39
  3.2.1 Street food outlets / vendors ................................. 39
  3.2.2 Street food consumers .......................................... 40
  3.2.3 Street vended foods ............................................. 40
3.3 Design of the study ......................................................... 41
3.4 Tools and Techniques of data collection ......................... 42
  3.4.1 Survey among street food vendors ......................... 42
  3.4.2 Rapid Assessment Survey among consumers of street
        vended foods ......................................................... 43
  3.4.3 Quality evaluation of street foods/ ingredients .......... 44
        3.4.3.1 Computation of nutrients and sensory evaluation ... 44
        3.4.3.2 Detection of adulterants in ingredients .......... 45
        3.4.3.3 Microbiological assay of street vended foods ...... 47
            3.4.3.3.1 Microbiological assay of foods prepared by
                          different methods of cooking ..................... 48
            3.4.3.3.2 Microbiological assay of specific foods for
                          food borne pathogens ............................. 50
  3.4.4 Microbiological assay of ice and water ................. 52
  3.4.5 Microbiological assay of swabs ............................... 52
  3.4.6 Hazard analysis of selected foods ......................... 53
  3.4.7 Development of food safety education module .......... 54
        3.4.7.1 Documentary on street foods ....................... 54
        3.4.7.2 Food safety kit for food handlers ................. 55
Chapter 4
RESULTS AND DISCUSSION .......................................................... 59 - 168

4.1 Background of the street food vendors and vending service ........ 59
  4.1.1 Demographic profile ............................................................ 59
  4.1.2 Characteristics of the street food outlets ............................... 62
  4.1.3 Foods served at the street food outlets ................................. 64
  4.1.4 Salient features of street food outlets .................................. 66
  4.1.5 Purchasing pattern of raw ingredients for food preparation ...................................................... 73
  4.1.6 Cleanliness and hygiene status of street food vendors and vending units .................................. 75

4.2 Background of the street food consumers ............................... 83
  4.2.1 Demographic profile of street food consumers ...................... 83
  4.2.2 Street food consumption particulars .................................. 86
  4.2.3 Nutrient intake from street food consumption ....................... 91

4.3 Nutrient Composition and organoleptic attributes of street vended versus laboratory prepared foods ................. 94
  4.3.1 Nutrient composition of street vended foods ......................... 94
    4.3.1.1 Deep fried snacks ....................................................... 94
    4.3.1.2 Steamed snacks ......................................................... 96
    4.3.1.3 Main dishes .............................................................. 97
    4.3.1.4 Vegetarian side dishes .............................................. 99
    4.3.1.5 Non vegetarian side dishes .................................... 100
    4.3.1.6 Main meal ............................................................... 101
    4.3.1.7 Chaats ................................................................. 103
  4.3.2 Organoleptic qualities of street vended and laboratory prepared foods .................................................... 104

4.4 Adulterants in the ingredients used for the preparation of street foods ............................................................... 108

4.5 Microbiological quality of street vended foods and HACCP evaluation for selected street foods .................................................. 112
  4.5.1 Microbial count of foods based on methods of cooking ............ 112
  4.5.2 Microbial count of street vended beverages .......................... 122
  4.5.3 Microbial count of street vended chaat and chutney .............. 127
  4.5.4 Microbial count of street vended snacks .............................. 132
4.5.5 Hazard Analysis and Critical Control Point (HACCP) protocol ................................................................. 137
4.6 Educational intervention for the street food vendors ........ 152
4.6.1 Documentary on street foods ........................................ 153
4.6.2 Food safety kit for food handlers ................................. 154
4.7 SWOT analysis of street food vending sector ................. 162

Chapter 5
SUMMARY AND CONCLUSION .................................................. 169 - 190
5.1 Characteristics of street food vendors and street food outlets ................................................................. 172
5.2 Characteristics of street food consumers ....................... 174
5.3 Nutrient composition and organoleptic attributes of street vended versus laboratory prepared foods ............ 175
5.4 Adulterants detected in ingredients used by street food vendors ................................................................ 177
5.5 Microbiological quality of street foods ......................... 177
5.6 Hazard Analysis and Critical Control Point (HACCP) evaluation ............................................................... 180
5.7 Food safety education and SWOT analysis ................. 182

BIBLIOGRAPHY ........................................................................ 191 - 222
APPENDICES ............................................................................. 223 - 250
