Abstract	xxvii
Chapter 1: Introduction	1
1.1 Energy: importance and consumption	2
1.2 Need for sustainable energy	3
1.3 Renewable energy- towards sustainable solution	4
1.4 Solar energy harvesting- need of the hour	5
1.4.1 Photovoltaic	6
1.4.2 Concentrating solar power	7
1.4.3 Solar thermal heating and cooling	7
1.4.4 Solar energy harvesting using solar collectors	8
1.4.5 Limitations of solar collectors	10
1.5 Nanoscience and nanotechnology - potential to harvest solar energy	11
1.5.1 Nanomaterials- synthesis routes	15
1.5.2 Characterization of nanomaterials	15
1.5.3 Use of nanomaterials for solar energy absorption	16
1.5.4 Limitations of solar selective absorber (SSA) coatings	17
1.6 Nanofluids- origin of the concept	18
1.6.1 Preparation Methods for Nanofluids	20
1.6.2 Stability of nanofluid	21
1.6.3 Nanofluid property analysis	21
1.7 Nanofluids for efficient solar energy absorption	22

1.7.1	Need of nanofluids for efficient solar energy absorption	24
1.8	Aim and objectives	26
1.9	Scope of the thesis	27
	References	29
	Chapter 2: Literature Survey	35
2.1	Introduction	36
2.2	Solar energy harvesting using conventional solar thermal collectors	37
2.2.1	Collectors basic configuration and performance	37
2.2.2	Collectors with artificial roughness/structural modifications	39
2.2.3	Collectors with solar selective absorber coating	42
2.3	Solar energy harvesting using direct absorption solar collectors	47
2.4	Solar energy harvesting using nanofluids	49
2.4.1	Metal nanofluids (copper & aluminium)	54
2.4.2	Metal oxide nanofluid (copper oxide & iron oxide)	59
2.4.3	Semiconductor nanofluids (SiO ₂ , ZnO, TiO ₂)	64
2.4.4	Non-metal nanofluid (carbon)	70
2.5	Overall findings from the literature review	72
2.6	Scope of the present work based on the gaps of the earlier studies	74
2.7	Outline of the present work	76
	References	77
	Chapter 3: Metal Nanofluids (Cu and Al) for Solar Heating, Desalination and Azeotropic Separation	91
3.1	Introduction	92
3.2	Materials and methods	94
3.2.1	Materials	94
3.2.2	Synthesis of copper nanoparticles	94
3.2.3	Characterization of copper and aluminium nanoparticles	95
3.2.4	Preparation of copper and aluminium nanofluid	95
3.2.5	Nanofluid stability and property evaluation	96

3.2.6	Solar energy absorption using copper and aluminium nanofluid	97
3.2.7	Solar desalination using copper and aluminium nanofluid	98
3.2.8	Copper nanoparticles enabled solar distillation of azeotropic mixture	99
3.3	Results and discussion	100
3.3.1	Copper nanoparticles synthesis: process intensification	100
3.3.2	Aluminium nanoparticles characterization	111
3.3.3	Copper and aluminium nanofluid: evaluation of stability and thermo-physical properties	112
3.3.4	Solar energy absorption using copper and aluminium nanofluid	116
3.3.5	Solar desalination using copper and aluminium nanofluid	124
3.3.6	Copper nanoparticles enabled solar distillation of azeotropic mixture	130
3.4	Conclusions	131
3.5	Need for the study of additional nanomaterials for solar energy harvesting	133
	References	133
	Chapter 4: Metal Oxide Nanofluids (CuO and Fe₂O₃) for Solar Heating, Desalination and Azeotropic Separation	137
4.1	Introduction	138
4.2	Materials and methods	139
4.2.1	Materials	139
4.2.2	Synthesis of copper oxide nanomaterials	139
4.2.3	Characterization of copper oxide and iron oxide nanomaterials	140
4.2.4	Preparation of copper oxide and iron oxide nanofluid	141
4.2.5	Nanofluid stability and property evaluation	141
4.2.6	Solar energy absorption using copper oxide and iron oxide nanofluid	141

4.2.7	Solar desalination using copper oxide and iron oxide nanofluid	142
4.2.8	Copper oxide nanomaterial enabled solar distillation of azeotropic mixture	142
4.3	Results and discussion	142
4.3.1	Copper oxide nanomaterial synthesis: process intensification	142
4.3.2	Iron oxide nanomaterial characterization	151
4.3.3	Copper oxide and iron oxide nanofluid: evaluation of stability and thermo-physical properties	153
4.3.4	Solar energy absorption using copper oxide and iron oxide nanofluid	156
4.3.5	Solar desalination using copper oxide and iron oxide nanofluid	165
4.3.6	Copper oxide nanomaterial enabled solar distillation of azeotropic mixture	170
4.4	Conclusions	171
4.5	Need for the study of additional nanomaterials for solar energy harvesting	173
	References	174
	Chapter 5: Semiconductor Nanofluids (SiO₂, ZnO and TiO₂) for Solar Heating, Desalination and Azeotropic Separation	177
5.1	Introduction	178
5.2	Materials and methods	179
5.2.1	Materials	179
5.2.2	Synthesis of SiO ₂ , ZnO and TiO ₂ nanomaterials	180
5.2.3	Characterization of SiO ₂ , ZnO and TiO ₂ nanomaterials	184
5.2.4	Preparation of SiO ₂ , ZnO and TiO ₂ nanofluid	184
5.2.5	Nanofluid stability and property evaluation	185
5.2.6	Solar energy absorption using SiO ₂ , ZnO and TiO ₂ nanofluid	185
5.2.7	Solar desalination using SiO ₂ , ZnO and TiO ₂ nanofluid	185

5.2.8	SiO ₂ and TiO ₂ nanomaterial enabled solar distillation of azeotropic mixture	186
5.3	Results and discussion	186
5.3.1	SiO ₂ , ZnO and TiO ₂ synthesis: different morphologies, shape and sizes	186
5.3.2	SiO ₂ , ZnO and TiO ₂ : evaluation of stability and thermo-physical properties	198
5.3.3	Solar energy absorption using SiO ₂ , ZnO and TiO ₂ nanofluid	202
5.3.4	Solar desalination using SiO ₂ , ZnO and TiO ₂ nanofluid	231
5.3.5	SiO ₂ and TiO ₂ nanomaterial enabled solar distillation of azeotropic mixture	249
5.4	Conclusions	249
5.5	Need for the study of additional nanomaterials for solar energy harvesting	253
	References	253
	Chapter 6: Non-metal Nanofluids (Carbon) for Solar Heating, Desalination and Azeotropic Separation	258
6.1	Introduction	259
6.2	Materials and methods	260
6.2.1	Materials	260
6.2.2	Synthesis of carbon nanoparticles	260
6.2.3	Characterization of carbon nanoparticles	261
6.2.4	Preparation of carbon nanofluid	261
6.2.5	Nanofluid stability and property evaluation	261
6.2.6	Solar energy absorption using carbon nanofluid	261
6.2.7	Solar desalination using carbon nanofluid	262
6.2.8	Carbon nanoparticles enabled solar distillation of azeotropic mixture	262
6.3	Results and discussion	262
6.3.1	Carbon nanoparticles synthesis: process intensification	262

6.3.2	Carbon nanofluid: evaluation of stability and thermo-physical properties	267
6.3.3	Solar energy absorption using carbon nanofluid	268
6.3.4	Solar desalination using carbon nanofluid	277
6.3.5	Carbon nanoparticles enabled solar distillation of azeotropic mixture	280
6.4	Conclusions	281
	References	282
	Chapter 7: Overall Conclusions	284
	Chapter 8: Recommendations for the Future Work	290
	Appendices	293
	List of Publications	298
