

LIST OF TABLES

Table No.	Description	Page No.
1.1	Properties of common non-oxide ceramics	3
3.1	Quantitative analysis of various compounds present in the ilmenite	52
3.2	Specification of the activated carbon	52
3.3	Process parameters of plasma operation	55
3.4	Designation and detailed composition of the composites	62
3.5	Levels of the variables used in the experiment	73
3.6	Erosion test conditions	73
5.1	Density and volume fraction of voids for Al-TiC composites.	89
5.2	Yield strength, compressive strength and percentage elongation of the composite with different volume fraction of the reinforcement	98
6.1	Density and volume fraction of voids of TiC filled glass epoxy composite	100
6.2	Micro hardness of polymer composites.	101
6.3	L ₁₆ Orthogonal array design with output and S/N ratio	103
6.4	Response Table for Signal to Noise Ratios	105
