

CONTENTS

Chapter 1 : Introduction	
(a) Definition of EDA complexes	1-2
(b) Areas of occurrence and application of EDA complexes	2-4
(c) Scope and object of the present work	4-6
Part I : Development of some graph theoretical methods and their applications to quinones and fullerenes	
Chapter 2 : A brief survey of known graph theoretical methods relevant to the work	
(a) Definitions	7-9
(b) Relation between graph theory and Huckel Molecular Orbital (HMO) theory	9-12
(c) Factorization of graphs	12-23
(i) Mirror plane fragmentation of graphs	12-15
(ii) Factorization of graphs involving n -fold rotational symmetry	15-20
(d) Determination of squares of eigenvector components	22-23
Chapter 3 : A method for construction of characteristic polynomials of linear graphs with arbitrary vertex- and edge- weights	
(a) Introduction	24
(b) Method	24-25
(c) Illustrations	25-27
Chapter 4 : Application of the method developed in the previous chapter	
Section I : A graph theoretical analysis of the electron acceptor properties of benzoquinones, catechol and quinol	28-36
Section II : Search for strongly subspectral pairs in C_{50+10n} and C_{60+12n} fullerenes via a common generic graph	
(a) Introduction	37
(b) Scheme for drawing the Schlegel diagrams of C_{50+10n} and C_{60+12n} fullerenes	38
(c) Factorisation of planar graphs of C_{50+10n} and C_{60+12n} fullerenes using five- and six-fold rotational symmetry	38-42
(d) Results	42-43
Part II : Experimental works	
Chapter 5 : Materials and methods	44-46
Chapter 6 : Studies on labile charge transfer complexes between <i>o</i> -chloranil and a series of phenols	

(a) Introduction	47
(b) Charge transfer (CT) absorption bands	47-48
(c) Analysis of the trend in CT transition energies using Mulliken's theory and graph theoretical method of calculation	48-58
(d) Results and kinetic studies	58-64
Chapter 7 : Study of a novel reaction between 2,3-dichloronaphthoquinone and N,N'-diphenylthiourea	
(a) Introduction	65
(b) Isolation of the final products	65
(c) Characterisation of the final products	66-69
(d) Kinetic study of the reaction	69
(e) Kinetic study of the thermal (dark) path	70-73
(f) Study of the photochemical path	74-77
Chapter 8 : Absorption and emission spectroscopic studies on the electron acceptor properties of C ₆₀	
Section I : Ground state EDA complex formation between [60]fullerene and a series of polynuclear aromatic hydrocarbons	
(a) Introduction	78
(b) Experimental	78-83
Section II : Study of quenching of anthracene fluorescence by [60]fullerene in n-hexane	
(a) Introduction	84
(b) Experimental	84
(c) Results and discussion	84-86
Summary and conclusion	87-89
Bibliography	90-102
List of publications	103
