LIST OF TABLES

Table 2.1: QS controlled genes and their phenotypic traits in *S. mutans* .............7

Table 3.1: Final selected ligands after TOPKAT and ADMET properties as ComA inhibitors .................................................................22

Table 3.2: Schematic representation of ADMET and TOPKAT properties of ComAI and its derivatives ..........................................................24

Table 4.1: Screening of *S. mutans* clinical strains for antibiotic and fluoride resistance ..................................................................................33

Table 4.2: Structure of reactants and their corresponding products ..................39

Table 4.3: IC$_{50}$ and EC$_{50}$ values of ComAI and its derivatives ......................41

Table 4.4: Synergistic activity of selected ligands with Fluoride (F) and Chlorhexidine (CHX) ........................................................................43

Table 4.5: Delta model of selected compounds with Fluoride (F) and Chlorhexidine (CHX) .................................................................45

Table 5.1: Primer sequence for qRT-PCR analysis of various genes in *S. mutans* .......................................................................................54

Table 5.2: Primer sequence used for qRT-PCR analysis of inflammatory markers in rat liver and blood ..................................................58
