

List of Figures

Figure No.	Title	Page No.
1.	General structural formula of organophosphorus compounds	7
2.	Chemical structures of pesticides used in this research	9
3.	Colorimetric determination of pesticides	13
4.	Working principle of capillary electrophoresis	14
5.	Mass spectrometry based detection of pesticides	15
6.	Working of gas chromatography technique	15
7.	Assembly of HPLC based determination of pesticides	16
8.	TLC based separation of compounds	17
9.	Assembly of FIA based determination of pesticides	18
10.	Basic principle of electrochemical biosensor	20
11.	Classification of Biosensor	23
12.	Diagrammatic representation of First Generation Biosensor	23
13.	Schematic representation of Second Generation Biosensor	24
14.	Schematic representation of Third Generation Biosensor	24
15.	Immobilization of enzyme using adsorption	29
16.	Crosslinking of enzyme using cross linker	29
17.	Microencapsulation procedure for enzyme immobilization	30
18.	Entrapment method of enzyme immobilization	30
19.	Procedure involved in covalent immobilization of enzyme	31
20.	Conversion of Acetylthiocholine in presence of enzyme AChE	33
21.	Principle of AChE inhibition-based OP biosensor	33
22.	Different supports available for fabrication of working electrode	34
23.	Standard curve of bovine serum albumin (BSA) using Lowry's method	56
24.	Gel filtration using Sephadex G-100 column chromatography	68
25.	Ion-exchange chromatography using DEAE-Sephacel column	70
26.	SDS PAGE of purified enzyme	71
27.	Apparent molecular weight determination by PAGE of AChE purified from <i>P. vulgaris</i> seedlings	72
28.	Apparent molecular weight determination by SDS-PAGE of AChE purified from <i>P. vulgaris</i> seedlings	72

List of Figures

Figure No.	Title	Page No.
29.	Relationship between Percent Relative Activity and pH	73
30.	Relationship between Percent Relative Activity and Temperature	73
31.	Relationship between Percent Relative Activity and Incubation Time	74
32.	Effect of Substrate Concentration on AChE activity	75
33.	Absorption peak of gold nanoparticles by UV-Vis Spectroscopy	75
34.	Particle Size Analysis of gold nanoparticles	76
35.	X- Ray Diffraction peaks of crystalline structure of gold nanoparticles	76
36.	Transmission Electron Micrograph of AuNPs	77
37.	SEM images of (a) Au wire without modification, (b) MWCNT/AuNPs assembled on Au wire and (c) Nafion/AChE-cSWCNT/MWCNT/AuNPs-Au	78
38.	FTIR of (a) MWCNT/AuNPs-Au and (b) AChE-cSWCNT/MWCNT/AuNPs-Au electrode	79
39.	Electrochemical Impedance of (a) Au wire (without modification), (b) MWCNT/AuNPs-Au and (c) Nafion/AChE-cSWCNT/MWCNT/AuNPs-Au. Inset showing mixed kinetic and diffusion control circuit	80
40.	Cyclic Voltammogram studies	81
41.	Effect of pH on biosensor response	82
42.	Effect of temperature on biosensor response	82
43.	Response of applied potential on the current response of Nafion/AChE-cSWCNT/MWCNT/AuNPs-Au electrode	83
44.	ATCl concentration effect on the response current of Nafion/AChE-cSWCNT/MWCNT/AuNPs-Au	84
45.	Lineweaver-Burk plot for response of ATCl concentration on the current of newly fabricated working electrode	85
46.	Response of time of incubation with Percentage inhibition	86
47.	Linearity study of pesticides	87
48.	Minimum detection study of Methyl Parathion at very low concentrations	89
49.	Correlation between pesticide levels in spiked water	90
50.	Interference study by different metal ions and other electro active species	91
51.	Storage stability showing 30 Percent loss in activity after continuous use of 2 months	94
