

LIST OF TABLES

Table #	Title	Page #
2.1	Mechanism of action of shikonin and its derivative in oncology	26
2.2	Mechanism of action of shikonin and its derivatives in Inflammation	31
2.3	Mechanism of action of shikonin and its derivatives in metabolic disorders	34
3.1	List of primary cancerous cell lines used in the present investigation	50
3.2	List of recombinant cell lines used in the present investigation	51
3.3	Primer pairs (5' - 3') sequences of genes used for recombinant cell line preparation	53
3.4	Reverse transcription master mix preparation	55
3.5	Thermal cycle setting for reverse transcription PCR	55
3.6	PCR master mix preparation (cDNA amplification)	56
3.7	Thermal cycle setting for PCR	56
3.8	Ligation mix preparation	58
4.1	Efficacy of shikonin in <i>in vitro</i> assay on multiple pain targets	82
4.2	Efficacy of shikonin on targets involved in metabolic disorders	90
4.3	Effect of shikonin on therapeutic targets in inflammation	92
4.4	Effect of shikonin on therapeutic targets in cardiovascular diseases	101
4.5	Efficacy of shikonin on oncology targets	105
