

LIST OF TABLES

TABLE NO.	TITLE	PAGE NO.
2.1	Sweetness of carbohydrates of wines	11
2.2	Ethanol content of different wines	13
2.3	Higher alcohols in wines	15
2.4	Acidity of a wine (g/L) before and after malolactic fermentation	16
2.5	Range of various esters identified in wines	21
2.6	Range of various metal ions in wines.	3
2.7	Chemical composition of some non-grape wines	27
2.8	Efficacy of some <i>Aloe-vera</i> based herbal wines against common food borne pathogens	43
2.9	Symptoms, complications and possible risk factors associated with DM	48
2.10	Classification of Jamun tree	56
2.11	Composition of Jamun fruit pulp	58
3.1	Randomized PB experimental design for evaluating factors influencing ethanol, TPC and TAC during stem wine production	77
3.2	Levels of independent variables used for optimization of stem wine production in PB design	78
3.3	CCD matrix of RSM for evaluating factors influencing ethanol, TPC and TAC of stem wine	79
3.4	Levels of independent variables used for optimization of stem wine production in RSM design	79
3.5	Randomized PB experimental design for evaluating factors influencing ethanol, TPC and TAC during leaf wine production	81
3.6	Levels of independent variables used for optimization of leaf wine production in PB design	81
3.7	CCD matrix of RSM for evaluating factors influencing ethanol, TPC and TAC of leaf wine	82
3.8	Levels of independent variables used for optimization of leaf wine production in RSM design	83
3.9	Randomized PB experimental design for evaluating factors influencing ethanol, TPC and TAC during seed wine production	84
3.10	Levels of independent variables used for optimization of seed wine production in PB design	85
3.11	CCD matrix of RSM for evaluating factors influencing ethanol, TPC and TAC of seed wine	86
3.12	Levels of independent variables used for optimization of seed wine production in RSM design	86
3.13	Randomized PB experimental design for evaluating factors influencing ethanol, TPC and TAC during pulp wine production	88
3.14	Levels of independent variables used for optimization of pulp wine production in PB design	88

TABLE NO.	TITLE	PAGE NO.
3.15	CCD matrix of RSM for evaluating factors influencing ethanol, TPC and TAC of pulp wine	89
3.16	Levels of independent variables used for optimization of pulp wine production in RSM design	89
4.1	Randomized PB experimental design for evaluating factors influencing ethanol, TPC and TAC during stem wine production	136
4.2	Statistical analysis of PB design for ethanol production in stem wine	139
4.3	Statistical analysis of PB design for TPC levels in stem wine	141
4.4	Statistical analysis of PB design for TAC levels in stem wine	142
4.5	Coded and actual values of the independent variables used in optimization of stem wine production	144
4.6	CCD matrix of RSM with response values for ethanol, TPC and TAC of stem wine	145
4.7	ANOVA table for ethanol production in stem wine under response surface quadratic model	146
4.8	ANOVA table for TPC in stem wine under response surface quadratic model.	151
4.9	ANOVA table for TAC in stem wine under response surface quadratic model.	156
4.10	Randomized PB experimental design for evaluating factors influencing ethanol, TPC and TAC during leaf wine production	162
4.11	Statistical analysis of PB design for ethanol production in leaves wine	165
4.12	Statistical analysis of PB design for TPC levels in leaf wine.	166
4.13	Statistical analysis of PB design for TAC levels in leaf wine.	167
4.14	Coded and actual values of the independent variables used in optimization of leaf wine production	168
4.15	CCD matrix of RSM with response values for ethanol, TPC and TAC of leaf wine	168
4.16	ANOVA table for ethanol production in leaf wine under response surface quadratic model.	170
4.17	ANOVA table for TPC in leaf wine under response surface quadratic model.	175
4.18	ANOVA table for TAC in leaf wine under response surface quadratic model.	180
4.19	Randomized PB experimental design for evaluating factors influencing ethanol, TPC and TAC during seed wine production	186
4.20	Statistical analysis of PB design for ethanol production in seed wine.	189
4.21	Statistical analysis of PB design for TPC levels in seed wine.	190
4.22	Statistical analysis of PB design for TAC levels in seed wine.	191
4.23	Coded and actual values of the independent variables used in optimization of seed wine production	193

TABLE NO.	TITLE	PAGE NO.
4.24	CCD matrix of RSM with response values for ethanol, TPC and TAC of seed wine	193
4.25	ANOVA table for ethanol production in seed wine under response surface quadratic model.	195
4.26	ANOVA table for TPC levels in seed wine under response surface quadratic model.	200
4.27	ANOVA table for TAC in seed wine under response surface quadratic model.	05
4.29	Randomized PB experimental design for evaluating factors influencing ethanol, TPC and TAC during pulp wine production	211
4.30	Statistical analysis of PB design for ethanol production in pulp wine.	213
4.31	Statistical analysis of PB design for TPC levels in pulp wine.	214
4.32	Statistical analysis PB design for TAC levels in pulp wine.	215
4.33	Coded and actual values of the independent variables used in optimization of pulp wine production	217
4.34	CCD matrix of RSM response values for ethanol, TPC and TAC of pulp wine	217
4.35	ANOVA table for ethanol production in pulp wine under response surface quadratic model	219
4.36	ANOVA table for TPC in pulp wine under response surface quadratic model.	224
4.37	ANOVA table for TAC in pulp wine under response surface quadratic model.	229
4.38	Composition of fresh Jamun wines	235
4.39	Phytochemical profile of Jamun wines	238
4.40	Composition of unmaturred and matured Jamun wines	241
4.41	Sensorial vote card of unmaturred and matured Jamun wines based on evaluation by ten tasters	247
4.42	Major bio-active compounds in Jamun wines identified by LC-Q-ToF-MS profiling	249
