Preface vii
Acknowledgements xiii
List of publications xv

1 Introduction 1
1.1 Integrability 2
1.2 The Painlevé approach 4
1.3 Symmetries and integrability 6
1.4 Direct method of finding integrals of motion 8
1.5 Jacobi’s last multiplier 9
1.6 Modified Prelle-Singer procedure 11
1.7 Linearization 15
1.8 Motivation and goals of the present study 16
1.9 Outline of the present study 18

2 Nonlinear generalization of damped harmonic oscillator: nonstandard conserved Hamiltonian structures 23
2.1 Introduction 23
2.2 Hamiltonian structure of DHO and MEE 24
2.3 A general class of nonlinear damped oscillator: Hamiltonian description 34
2.4 Generalized MEE: Hamiltonian structure and general solution 38
2.5 Damped Mathews-Lakshmanan oscillator 45
2.6 Conclusion 50

3 Integrability of a new integrable second order nonlinear ordinary differential equation 51
3.1 Introduction 51
6 Nonlocal symmetries of a class of scalar and coupled nonlinear ordinary differential equations of arbitrary order 163
6.1 Introduction ................................................. 163
6.2 Nonlocal symmetries ........................................... 165
6.3 Nonlocal symmetries: Third order ODEs ..................... 177
6.4 Arbitrary order nonlinear ODEs .............................. 180
6.5 Coupled second order nonlinear odes ....................... 182
6.6 Conclusion ................................................. 188

7 Generalized contact linearizing transformations of scalar and coupled Riccati chains and their generalizations 189
7.1 Introduction ................................................. 189
7.2 Generalized contact transformation of scalar Riccati chain .... 190
7.3 Generalized scalar Riccati chain .............................. 194
7.4 Generalized contact transformations for coupled Riccati chains . 197
7.5 Generalized coupled Riccati chain ........................... 201
7.6 Conclusion ................................................. 205

8 Summary and Outlook 206
8.1 Summary of the thesis ........................................ 206
8.2 Outlook on future research ................................. 209

Bibliography 211
