Acknowledgments

It is my pleasure and privilege to express deep gratitude to Professors N.S. Viswanath and T.V. Raju, my supervisors, for their benevolent and intense guidance throughout this effort. Also, I place on record my gratitude to my beloved father Dr. T. Srivennkataramana, Former Professor of Statistics, Bangalore University, for motivating and closely monitoring this work and for his blessings. I thank the Manipal Academy of Higher Education, Manipal and Bhavan’s Management Research Center, Bengaluru for providing the opportunity for this academic effort and encouraging the same all through. I acknowledge the constructive suggestions by all the Doctoral Advisory Committee (DAC) Members which have led to considerable improvement in the Thesis. The cooperation provided by the Bowring & Lady Curzon Hospitals, Jayadeva Institute of Cardiovascular Sciences and Research, K. C. General Hospital, M S Ramaiah Memorial Hospital, Narayana Institute of Cardiac Sciences, RMD cancer hospital, Sri Shankara Cancer Hospital & Research Centre, The Lady Goschen Govt. Hospital, The Yeshasvini Cooperatives Farmers’ Healthcare Trust, Vikram Hospital and Wenlock District Hospital is gratefully acknowledged. Also, I would like to place on record my thanks to the participating patient-respondents and their families.

My beloved parents, two dear sisters and brothers-in-law, wife and at a later stage, my little son Chi Skanda all deserve a bouquet of thanks for allowing me to steal away sufficient time and attention, to pursue the work, but really deserved by them. I am indebted to my uncle, Dr T.N. Bhat, Maryland, USA, for some constructive and insightful inputs. Also, an important work of his is referred to in this dissertation. I am grateful to the Fellow Researchers at the Foundation for useful discussions and interaction. Several of my close friends have provided encouragement at crucial stages of the work.

I thank the Almighty for his continued Anugraha in my life.
