
Acknowledgements

This thesis would not have been materialised without the sincere help of some others. I take this opportunity to express a few words of gratitude to them.

At the outset, I express my sincere gratitude to my guide, Dr. Anitha I, Head of the Department of Chemistry, Maharaja's College Ernakulam. It was her sincere guidance, continuous support and encouragement which made this thesis work a successful venture. On this occasion I remember her with deep sense of gratitude, reverence and affection.

I wish to thank The Principal Maharaja's College, Ernakulam for providing necessary help and facilities for carrying out my research work.

I take this opportunity to express my heartfelt thanks with due respect to Dr. K. Girishkumar, Professor of Analytical Chemistry, Cochin University of Science and Technology for the sincere help and advice extended to me for the completion of the thesis. His valuable suggestions and encouragement have inspired me throughout the entire period of my research. It is his magnanimity which permitted me to make use of all the facilities in his laboratory, CUSAT.

I am very much grateful to the Principal and members of the staff, TMJM Govt. College Manimalakunnu and the members of the staff, Department of Chemistry, Maharaja's College, Ernakulam for their support and cooperation.

I also like to thank the UGC, for granting the opportunity and financial support for doing PhD course, under the Faculty Development Programme.

I express my thanks to Dr. Meera Gopal who inspired me to undertake the PhD work, and for all the help and suggestions provided. I would also like to express my sincere thanks to my colleagues of the Department of Chemistry, TMJM Govt. College Manimalakunnu.

It would be unjust if I do not thank my labmates Soumya, Jesny, Safna, Meera, Unni, Salini, Ammu, Noufia, Ambily and Gopika for their affectionate support and encouragement. Their attentiveness and sincerity extended to me for the fulfilment of this thesis are beyond any words of gratitude. Bright memories of those days together with them will remain with me for ever. A special word of gratitude to Jesny, Salini and Ammu who helped me a lot in the correction of the thesis. My sincere thanks to Dr. Divya Thomas for the endurance and hard work she rendered in the correction of my paper published in the Journal of Fluorescence.

My thanks in particular to Rejimon and Jincy who helped me a lot during the entire period of my PhD work, I would like to thank Dr. Gisha George for the help given to me in the correction of the thesis.

I am also thankful to the Librarians, MG University and CUSAT and also to the research scholars of Polymer lab, Organic and Biochemistry labs, CUSAT for their help and support. A special thanks to Dr. Anuja, Dr. Laina, Laly, Aswathy for their timely help and support. A word of gratitude in particular to Vijeesh, Dr. Mathews, Department of Photonics, CUSAT and also to Bindya, Kiran and Tina, Department of Biotechnology CUSAT for all the help rendered to me. On this occasion I remember Dr. Prathapachandra Kurup, CUSAT for the help rendered for refining structure of crystal. I admire Dally and shanty for their help and suggestions.

My family has always helped me a lot for the successful completion of this work. They were always with me with their prayful support. I remember Sasichettan, Shailamma and beloved Kannan on this occasion. Also I acknowledge my gratitude to my family members at Cherthala. Beyond words, I am highly obliged to my mother whose prayers which I consider an impetus to me to overcome all the crises which I met with throughout the way.

The immense moral support I received from my husband Chandrababu helped me to realise my dream. He suffered a lot while helping me to achieve this aim. My children Ashis and Anu were always with me with their whole hearted support and endurance during this period. This thesis is the fruit of their sacrifice, I can't find enough words to thank them.

I thank the scientists Sophisticated Test and Instrumentation Centre, Kochi and Department of Environmental Sciences, MG University, Kottayam and Technical Staff CUSAT for various analysis techniques. I am also thankful to the Department of Applied Chemistry, Department of Biotechnology and Department of Photonics CUSAT, Kochi for the technical support provided. I also use this occasion to thank the staff members, School of Chemical Sciences, MG University, Kottayam.

Finally I would like to thank everybody who was behind me for the fulfilment of my thesis.

I thank God Almighty, who makes everything possible in this world, for all the blessings He has showered upon me.

Sheela Gopal M
