

Sl. No.	Contents	Page No.
Chapter One		
Quality of Life in Sirkazhi Coast: An Introduction to the Problem and Review of Literature		
1.1	Introduction	14
1.2	Aquaculture: Definition	15
1.3	History of Aquaculture	16
1.4	Types of Aquaculture	18
1.4.1	Alga culture	18
1.4.2	Fish farming	18
1.4.3	Fresh water prawn farming	18
1.4.4	Integrated multi-trophic aquaculture	19
1.4.5	Mari culture	20
1.4.6	Shrimp farming	21
1.4.7	Types of Shrimp Farming	22
1.4.7.1	Static freshwater ponds	22
1.4.7.2	Brackish water ponds	23
1.5	World aquaculture	23
1.6	Regional growth of aquaculture	26
1.6.1	Aquaculture presence in India	26
1.6.2	Aquaculture development Tamil Nadu	27
1.6.3	Aquaculture in Nagapattinam	28
1.7	Shrimp Farming - Production and Consumption (World level)	29
1.7.1	The Basics of Shrimp Farming	29
1.7.2	The Producing Countries	31
1.7.3	The Consuming Countries	32
1.8	Fish production trends in India	34
1.8.1	Fishery resources	34
1.8.2	Fish production	34
1.8.3	Inland fisheries resources	35
1.8.4	Freshwater and brackish water aquaculture	35
1.8.5	Reservoir fisheries	36

1.9	Land use patterns and aquaculture	36
1.10	Exports of products from aquaculture	38
1.11	Definition of Disaster	40
1.11.1	Tsunami: Definition and Basic Concept	40
1.11.2	Causes of Tsunami	40
1.11.3	Historical Events of Tsunami in India	40
1.12	Physiography of East Coast	41
1.13	Impact of Tsunami	42
1.13.1	Tsunami Hazard Assessment	42
1.13.2	Tsunami Vulnerability Assessment	42
1.13.3	Tsunami Risk Assessment	43
1.14	Mangroves types	43
1.15	Mangroves function and values	47
1.16	Spatial Information Technology	48
1.17	Literature Review	49
1.18	Problem Statement	61
1.19	Objectives	66
1.20	Methodology	66
1.21	Chapterization	69

Chapter Two

Kollidam Estuary and Sample Ponds Environmental Quality: A Study Area Profile

2.1	Introduction	70
2.2	Brief History of the study area	72
2.3	Physical Aspects	73
2.3.1	Relief	76
2.3.2	Geology	77
2.3.3	Soil Types	78
2.3.4	Mineral Resources	80
2.4	Rainfall and Climate	81
2.5	Agriculture and Horticulture	83
2.6	Land utilisation	83
2.7	Vegetation	84

2.8	Forest Area	85
2.8.1	Forest types	85
2.9	Fauna	85
2.10	The Coastal regions	86
2.10.1	Tidal Amplitude	86
2.11	Population	87
2.12	Transport	87
2.13	Places of Tourist Attraction	88

Chapter Three

Quality of Aquaculture Farm practice in Kollidam Estuary: Surface water quality and Environmental land degradation

3.1	Introduction	90
3.2	Coastal Morphology	91
3.2.1	Coastal Changes	92
3.2.2	Importance of Coastal Areas	92
3.3	History, Definition and Purposes	93
3.4	Shrimp Farms: A Global Phenomenon	94
3.5	Impact on Mangrove Ecosystem	95
3.6	Waste water Characteristics and its Food and Nutrient Values	97
3.7	Range of pond water quality in shrimp ponds	97
3.7.1	Salinity	98
3.7.2	pH	98
3.7.3	Dissolved oxygen (DO)	99
3.7.4	Nitrogen compound	100
3.7.5	Temperature	100
3.7.6	Hydrogen sulfide, H ₂ S	101
3.7.7	Soil quality	101
3.7.8	Pond construction	101
3.7.9	Water supply and drainage	102
3.8	World Shrimp Production and Consumption	102
3.9	Distribution of Shrimp farms in India	103
3.10	Impact of Shrimp Farms on Society	105

3.10.1	Water Pollution	106
3.10.2	Biodiversity losses	108
3.10.3	Health hazards	109
3.10.4	Spread of diseases	111
3.10.5	Changing Natural Resource use and Deteriorating Livelihoods	114
3.10.6	Mangrove deforestation	115
3.10.7	Encroachment upon agricultural land	118
3.10.8	Polluted waters	120
3.11	Methods	123
3.12	Bio-Chemical Qualities of Surface Waters in Sirkazhi Shrimp Farm Zones	125
3.13	Physico-Chemical Qualities of surface waters nearby shrimp farms	129
3.13.1	Hydrogen-Ion Activity (pH)	131
3.13.2	Specific Electrical Conductance	133
3.13.3	Chloride	137
3.13.4	Ammonia	139
3.13.5	Nitrate	141
3.13.6	Occurrence of Phosphate in Water	141
3.13.7	Oxygen	143
3.13.8	Biochemical Oxygen Demand (BOD)	144
3.13.9	Chemical Oxygen Demand (COD)	145
3.13.10	Hardness	147
3.13.11	Redox Potential	149
3.13.12	Total Dissolved Solids	149
3.14	Soil Analysis	151
3.15	Spatial Pattern of Physico-Chemical qualities around the Shrimp Farms	152
3.16	Inter-relationship between the Physico-Chemical qualities in the Shrimp Farm Zones	153
3.17	Conclusion	156

Chapter Four

Kollidam Estuary: Pre and post tsunami conditions of Mangrove forests and a sample study for safe aquaculture Practice

4.1	Introduction	158
4.2	Mangrove Forest Definition	161
4.3	Importance of Mangroves	162
4.4	Growth of Mangroves	163
4.5	Historical development of mangrove forest	164
4.6	Adaptations to low oxygen	166
4.7	Limiting salt intake	167
4.8	Limiting water loss	167
4.9	Nutrient uptake	168
4.10	Increasing survival of offspring	168
4.11	World distribution of mangrove forest	171
4.12	Tsunami impact on mangrove forest	177
4.13	Impact of Tsunami on Mangrove ecosystem	179
4.14	Mangrove forest can reduce impact of tsunami	180
4.15	Shrimp ponds and Environmental Implication	188
4.15.1	Ecological impacts	188
4.15.2	Social changes	192
4.15.3	Wetland utilization	194
4.15.4	Effluent discharge	194
4.15.5	Impact on Surface Waters (water pollution)	194
4.15.6	Contamination of soil and ground water	196
4.15.7	Habitat degradation	198
4.15.8	Biodiversity change	199
4.15.9	Health hazards	201
4.15.10	Encroachment upon agricultural land	202
4.15.11	Polluted waters	204
4.15.12	Aquaculture legislation	204
4.16	Tsunami Impact and Rejuvenation of Aquaculture Farm Characters	208
4.17	Conclusions	225

Chapter Five
Findings, Summary, Recommendations and conclusion

5.1	Introduction	227
5.2	Benefits of the Prawn Culture	229
5.2.1	Economic Benefits	229
5.2.2	Social Benefits	230
5.3	Community participation in inevitable in prawn culture	232
5.4	Improvement of Socio-Economic and Agricultural Farm Labour	233
5.5	Cost of the Prawn culture Economic Cost	235
5.6	Impacts of Prawn Culture on Various Fields	236
5.7	Impacts on environment	236
5.8	The following are the other impact of prawn culture on environment	237
5.8.1	Salt water seepage	237
5.8.2	Soil degradation and pollution of the environment	238
5.8.3	Spread of diseases	238
5.8.4	Floods due to construction of Prawn Farm	238
5.8.5	Cutting of trees in the coastal zone	239
5.8.6	Closing of river mouth / Estuaries	239
5.8.7	Hindrance to Fishing	239
5.8.8	Impact on employments	239
5.9	Conclusions	240
	References	245

Table no.	List of Tables	Page No.
3.1	The following are the various parameters required for a shrimp farm	9
3.2	Shrimp Production Details in Sirkazhi Taluk	127
3.3	Shrimp Farm Waste Water Quality Results	129
3.4	Shrimp Farm: Soil Analysis of Nearby Areas	151
3.5	Inter-correlation Matrix between the Physico-Chemical variables	154
4.1	Area under Mangroves in India	174
4.2	Mangrove of TamilNadu	175
4.3	Pre and Post Tsunami Implications Results of Digital Image Analysis for Mangrove Forest Cover	186
4.4	July-1st to October 30th-2004. (Before Tsunami)	220
4.5	March -2nd to June 30th 2005 (After Tsunami)	223

Figure No.	List of Figures	After Page #
2.1	Study Area : Sirkazhi Taluk	74
3.1	Sirkazhi Coast: Selected Village and Water Samples Locations	124
3.2	Hydrogen-Ion Activity (pH)	132
3.3	Conductivity	136
3.4	Chloride	138
3.5	Ammonia	140
3.6	Phosphate	142
3.7	Biochemical Oxygen Demand (BOD)	145
3.8	Chemical Oxygen Demand (COD)	146
3.9	Hardness	148
3.10	Total Dissolved Solids	150
4.1	Kollidam Esturary Pichavaram Mangrove Forest Zone	182
4.2	Pichavaram Coast Zone – Land Use Pattern	183
4.3	Pichavaram Coast Zone – Road Network	184
4.4	Pichavaram Coast Zone – Drainage Network	185
4.5	Pre and Post Tsunami: Changing Pattern of Mangrove Forests	187
4.6	Pre and Post Tsunami: Changing Pattern of Mangrove Forests (Zoomed Image)	187
4.7	Pappakoil Village : Sample Shrimp Pond Location	214
4.8	Pappakoil Village : Location of Shrimp Pond	215
4.9	Pappakoil Village : Land use Pattern	216
4.10	Pappakoil Village : Vulnerable Zone and Environmental Implications	217
4.11	Pappakoil Village : Shrimp Culture: Sources of Water Inlets and Outlets	218
4.12	Pappakoil Village : A Sample Pond	219
4.13	Pappakoil Village : Pond with Surrounding Stagnant Waste Water Areas	219
