List of Figures

Figure 3.1 Product Promotion.................................................................13
Figure 3.2 e-WOM on Social Network..................................................16
Figure 3.3a Network Value of Seed “I”..................................................16
Figure 3.3b Network Value of Seed “D”..................................................16
Figure 3.4 Classification of Nature Inspired Algorithms........................19
Figure 3.5 Differential Evolution Algorithm..........................................21
Figure 3.6 Particle Swarm Optimization Algorithm.............................23
Figure 3.7 Firefly Algorithm.................................................................25
Figure 3.8 Frameworks for Targeted Product Promotion Strategy on Social
                  Networks..................................................................................26
Figure 3.9 Changing Market Demands..................................................27
Figure 3.10 Market Analysis.................................................................27
Figure 4.1 User Interest towards Features of Digital Camera..................32
Figure 4.2 Functioning of POS Tagger..................................................35
Figure 4.3 Syntactic Rules for One-Word Feature Extraction..................35
Figure 4.4 Syntactic Rules for Two-Word Feature Extraction..................36
Figure 4.5 Example of Syntactic Analysis Based Feature Extraction........36
Figure 4.6 Pattern of Extracted Product Features....................................36
Figure 4.7 Quick Reduct.........................................................................42
Figure 4.8 Entropy Based Reduct Algorithm..........................................43
Figure 4.9 FA_RSAR Algorithm............................................................51
Figure 4.10 Market Analysis Techniques...............................................54
Figure 4.11 User Interest Estimation using Feature Based Profile..............58
Figure 5.1 Firefly Algorithm based Clustering Technique(FClust).............65
Figure 5.2 S1 Dataset -RLD plots for TRW measure...............................74
Figure 5.3 S1 Dataset -RLD plots for VRC measure.................................74
Figure 5.4 S2 Dataset -RLD plots for TRW measure.................................75
Figure 5.5     S2 Dataset -RLD plots for VRC measure ............................................................75
Figure 5.6     Iris Dataset -RLD plots for TRW measure ..........................................................76
Figure 5.7     Iris Dataset -RLD plots for VRC measure ..........................................................77
Figure 5.8     Cancer Dataset -RLD plots for TRW measure .....................................................77
Figure 5.9     Cancer Dataset -RLD plots for VRC measure .....................................................78
Figure 5.10   Wine Dataset -RLD plots for TRW measure .......................................................78
Figure 5.11   Wine Dataset -RLD plots for VRC measure .......................................................79
Figure 5.12   Thyroid Dataset -RLD plots for TRW measure ....................................................80
Figure 5.13   Thyroid Dataset -RLD plots for VRC measure ....................................................80
Figure 6.1     Influence Spread in Social Network ....................................................................83
Figure 6.2     Social Graph ......................................................................................................84
Figure 6.3     Propagation of Social Actions on Social Networks ..............................................85
Figure 6.4     Interest Based Propagation on Social Networks .................................................86
Figure 6.5     Influential Probability Estimation .......................................................................86
Figure 6.6     Mean Absolute Error of SBCF vs. CSF ............................................................89
Figure 6.7     Mean Absolute Error of Hybrid vs. CCF ............................................................91
Figure 6.8     Mean Absolute Error of Hybrid, SBCF vs. CCF ................................................92
Figure 6.9     Example of Social Graph ....................................................................................95
Figure 6.10   Greedy Algorithm for K-Max Influence ...............................................................95
Figure 6.11   DE Algorithm for K-Max Influence .....................................................................97
Figure 6.12   Flowchart for FA algorithm for K-Max Influence ................................................98
Figure 6.13   Pseudo-code for Graph Sampling .........................................................................99
Figure 6.14   Gain by Increasing the Value of k from 10 to 20 .................................................104
Figure 6.15   Gain by Increasing the Value of k from 20 to 40 ................................................104
Figure 6.16   Influence Spread for Vote Data Set ....................................................................105
Figure 6.17   Influence Spread for Epinion Data Set ...............................................................105
Figure 6.18   Influence Spread for Slash Data Set ....................................................................106
Figure 6.19   Influence Spread for NetHEPT .........................................................................106
Figure 6.20   Influence Spread for NetPHY Data Set ...............................................................106
Figure 6.21   Precision Value with k=2 ...................................................................................109
Figure 6.22   Recall Value with k=2 .......................................................................................110
Figure 6.23  F1 Measure with k=2...........................................................................................................110
Figure 6.24  Precision Value with k=3 ....................................................................................................111
Figure 6.25  Recall Value with k=3 .........................................................................................................111
Figure 6.26  F1 Measure with k=3...........................................................................................................111
