

CONTENTS

LIST OF TABLES	vi
LIST OF FIGURES	vii-viii
ABBREVIATIONS	ix-xi
CHAPTER 1: INTRODUCTION	1-39
1.1 Groundnut	2
1.1.1 Genesis of cultivated groundnut	3
1.1.2 Morphological characteristics	4
1.1.3 Groundnut production statistics	4
1.1.4 Constraints to groundnut productivity	8
1.2 What is salinity and how plants tolerate it?	10
1.2.1 How plants counter salinity stress?	10
1.2.2 Ion homeostasis	12
1.2.2.1 Na ⁺ homeostasis at whole plant level	13
1.2.2.2 Na ⁺ homeostasis at cellular level	15
1.3 What is drought and how plants respond it?	17
1.3.1 How plants respond to drought at whole plant level?	18
1.3.2 Responses against the drought stress at cellular level	19
1.3.2.1 Functional proteins	19
1.3.2.2 Regulatory proteins	20
1.3.2.2.1 ABA-dependent signalling pathway	21
1.3.2.2.2 MAP Kinase pathway	25
1.3.2.2.3 Ca ²⁺ -dependent pathway	26
1.4 Genetic engineering of groundnut: strategies to improve stress tolerance	28
1.4.1 Groundnut tissue culture	29
1.4.2 Genetic transformation of groundnut	31
1.4.2.1 Biolistic mediated transformation	31
1.4.2.2 <i>Agrobacterium</i> -mediated transformation	32
1.5 Abiotic stress tolerance and <i>ASR-1</i> gene	35

CHAPTER 2: MATERIALS AND METHODS	40-72
2.1 MATERIALS	40
2.1.1 Plant materials	40
2.1.2 Bacterial Strains	40
2.1.3 Plasmid and construct	40
2.1.4 Chemicals and consumables	41
2.1.5 Enzymes and reaction kits	42
2.1.6 Oligonucleotides used in the study	43
2.1.7 Media, buffers and solutions	43
2.1.8 Bacterial Growth Media	43
2.1.9 MS salts and B ₅ organic medium	44
2.1.10 Equipments	45
2.2 METHODS	46
2.2.1 Extraction of genomic DNA	46
2.2.2 Isolation promoter region of <i>SbASR-1</i> gene	46
2.2.3 Purification of PCR products and ligation into pGEM-T Easy vector	49
2.2.4 Competent cell preparation	51
2.2.5 Extraction of recombinant plasmid DNA from <i>E. coli</i>	52
2.2.6 Determination of number of paralogues of <i>SbASR</i> gene family and genomic organisation of <i>SbASR-1</i> gene	52
2.2.6.1 Probe synthesis	52
2.2.6.2 Southern blotting and hybridization	53
2.2.6.3 Genomic organisation of <i>SbASR-1</i>	54
2.2.7 <i>In-silico</i> analysis of <i>SbASR-1</i> gene and its promoter	54
2.2.8 Optimization of regeneration protocol for <i>A. hypogaea</i>	55
2.2.8.1 Shoot induction	56
2.2.8.2 Shoot elongation	57
2.2.8.3 Rooting and hardening	57
2.2.9 Determination of lethal dose (LD ₅₀) of hygromycin	58
2.2.10 Isolation of <i>pCAMBIA1301-SbASR-1</i> from <i>E. coli</i> and mobilization into <i>Agrobacterium</i> strain	58
2.2.11 Optimization of transformation protocol	59

2.2.11.1 Effect of phytohormone on transformation and regeneration	60
2.2.11.2 Phytohormone analysis of the transformed explants	61
2.2.12 Genetic transformation in de-embryonated cotyledons and regeneration of transgenic plants	62
2.2.13 Histochemical GUS assay	63
2.2.14 Molecular analysis	64
2.2.14.1 DNA extraction from transgenic plants	64
2.2.14.2 Determination of transgene copy number	64
2.2.14.3 Isolation of RNA from leaf tissues, cDNA synthesis and RT-PCR	64
2.2.15 Analysis of T1 transgenic lines	66
2.2.15.1 Plant germination and stress treatments	66
2.2.15.2 Estimation of photosynthetic pigments	66
2.2.15.3 Relative water content	67
2.2.15.4 Electrolyte Leakage	67
2.2.15.5 Estimation of free proline	68
2.2.15.6 Estimation of Lipid peroxidation	69
2.2.15.7 Estimation of Total Soluble Sugar, Reducing Sugar, and Starch	69
2.2.15.8 <i>In-vivo</i> localization of peroxide and superoxide radicals	70
2.2.15.9 Isolation of total RNA and Real-time quantitative PCR	71
2.2.16 Statistical analyses	72
CHAPTER 3: RESULTS	73-112
3.1 Characterization of <i>SbASR-1</i> gene	73
3.1.1 Isolation of <i>SbASR-1</i> promoter	73
3.1.2 Genomic organisation of <i>SbASR-1</i> gene	73
3.1.3 <i>In-silico</i> analysis	74
3.1.4 Determination of number of paralogues in <i>SbASR</i> gene family	79

3.2 Optimization of regeneration protocol	84
3.3 Determination of lethal dose (LD ₅₀) of hygromycin	87
3.4 Optimization of transformation protocol	88
3.4.1 Optimization of factors affecting transformation	89
3.4.2 Effect of phytohormone on transformation and regeneration	91
3.5 Transformation, regeneration, selection, elongation, grafting and hardening of putative transgenic lines	93
3.6 Confirmation of transgenic lines	96
3.6.1 Confirmation of transgenic lines with PCR	97
3.6.2 Confirmation of transgenic lines with Southern hybridization	98
3.6.3 Confirmation of transgene expression in transgenic lines	98
3.7 Analysis of T1 transgenic lines	100
3.7.1 Estimation of photosynthetic pigments	101
3.7.2 Electrolyte leakage	105
3.7.3 Estimation of proline content	105
3.7.4 Relative water content (RWC)	105
3.7.5 Lipid peroxidation assay	107
3.7.6 Total soluble sugar, reducing sugar and starch content	107
3.8 <i>In-vivo</i> localization of peroxide and superoxide radicals	109
3.9 Isolation of total RNA and transcript expression	111
CHAPTER 4: DISCUSSION	113-134
4.1 Characterization of <i>SbASR-1</i>	114
4.2 Groundnut tissue culture	119
4.3 Optimization of hygromycin lethal dose (LD ₅₀)	120
4.4 Optimization of transformation parameters	121
4.5 Genetic transformation of groundnut	126
4.6 Confirmation of putative transgenic line	127
4.7 Analysis of T1 transgenic lines	128
4.7.1 Estimation of photosynthetic pigments	129
4.7.2 Electrolyte leakage and MDA contents	130
4.7.3 Estimation of proline	130
4.7.4 Relative water content	131

4.7.5 Total soluble and reducing sugar, starch content	131
4.7.6 <i>In-vivo</i> localisation of H ₂ O ₂ and O ₂ ⁻ radicals	132
4.7.7 Transcript expression analysis of genes coding for antioxidative enzymes	133
CHAPTER 5: SUMMARY AND CONCLUSION	135-140
REFERENCES	141-172
