Chapter 1.

Tuberculosis (TB) – The Disease Picture

1 1	Introduction	2
1 2.	The Disease Picture	4
1.2 1	The Organism	4
1 2 2.	Deciphering the mycobacterial genome	6
1.2 3.	Biology of mycobacteria	8
1.2 4	Pathogenesis	12
1 2 5.	Drug-resistant TB	15
1 2 6.	Diagnostic techniques	16
1 2.6 1.	Tuberculin skin test (Mantoux skin test)	17
1 2 6 2	Acid-Fast Bacillus (AFB) smear test	17
1 2 6 3	Radiological methods and imaging techniques	18
1 2 6 4	Culture techniques	18
1 2.6 5	Newer diagnostic tools	18
1 3	TB Chemotherapy	24
1.3 1	Historical account	24
1.3 2	Current anti-TB drug regimen	25
1 3 3	TB Drugs and their targets	27
1 3 4	Problems of current TB therapy	29
1 4	Vaccines for TB	31

Chapter 2.

Recent Developments in TB Chemotherapy

2 1.	Antimycobacterial agents with known or suspected mode of action	37
2 1 1	Fatty acid biosynthesis inhibitors	46
2 1 1 1	Isoniazid analogues	46
2 1 1.2.	Pyrazinamide analogues	47
2 1 1.3	Thioamides	48
2 1 1 4	Diaryl ethers	48
2.1 1 5	Thiolactones	49
2 1 1 6	Alkyl sulfonylcarboxamides	49
2 1 1 7	Diaryl ureas/thioureas	49
2 1.1 8	Pyrazoles	50
2 1 1 9	Nitroimidazoles	50
2 1 2	Arabinogalactan and peptidoglycan biosynthesis inhibitors	51
2 1.2 1	Ethylenediamines	52
2 1 2 2.	D-Cycloserine analogues	53
2 1 2 3.	Trehalose analogues	53
2 1 2 4.	Rhodamines	54
2 1.2 5	Arabinose analogues	55
2.1 2 6	Riminophenazines	56
2.1 2 7.	β -Lactam antibiotics	56
2 1 2 8	Miscellaneous antibiotics	57
2 1 3.	Protein synthesis inhibitors	57
2 1 3 1	Aminoglycoside antibiotics	58
2 1 3 2	Cyclic peptide antibiotics	58
2.1.3.3	Macrolide antibiotics	59
2 1 3 4	Oxazolidinones	59
2 1 3 5	Thiazole peptide antibiotics (Nocathiacins)	61
2.1 3.6	Pleuromutilins	61
2 1.4	Inhibitors of nucleic acid synthesis	61
2.1 4 1.	Rifamycins	61
2 1 4 2	Indolecarboxylic acid	62
2 1.4 3.	Fluoroquinolones (FQs)	62
2 1.4 4	Pyrimidine nucleoside analogues	64

2 1 4 5.	Purine nucleoside analogues	64
2 1 5.	Dihydrofolate reductase (DHFR) inhibitors	65
2 1 5.1	Diaminopyrimidines	65
2 1 5.2	Deazapteridines	66
2 1 5.3	Triazines	66
2 1 6.	Inhibitors of siderophore biosynthesis	66
2 1 6.1	Salicylamide analogues	66
2 1 6.2	Mycobactins	67
2 1 7	Inhibitors of proton pump	67
2 1 7.1	Diarylquinolines	67
2 1 8.	Inhibitors of cytochrome P ₄₅₀ (CYP ₄₅₀) enzymes	68
2 1 8.1	Azoles	68
2.1 9	Tubulin polymerization inhibitors	69
2 1 9.1	Deazapteridines/pteridines	69
2 1 9.2	Thioethers	69
2 1 9.3	Benzimidazoles	70
2 1 10	Inhibitors of branched-chain amino acid biosynthesis	70
2 1 10.1	Sulfonylureas	70
2.1 11	Signaling transduction inhibitors	70
2.1 11.1	Salicylanilides	70
2.1.11.2	Isoquinoline sulfonamides	71
2 1.11.3	Benzothiophenes	71
2 1 11.4	Quinoxalines	71
2.1.11.5	Tyrosine kinase inhibitors	72
2 1.12	Miscellaneous mechanism-based inhibitors	72
2.1 12.1.	Pyridazinoindoles	72
2 1 12.2.	Phenothiazines	72
2 1 12.3	Isocitrate lyase (ICL) inhibitors	73
2 1 12.4.	Peptide deformylase (PDF) inhibitors	73
2 1 12.5	Pantothenate synthetase (PS) inhibitors	74
2.2.	Antimycobacterial agents with unknown mechanism of action	74
2 3	Drug targets in mycobacteria	88

Chapter 3.

Biological Importance and Chemistry of Pyrimidine

3.1	Biological importance of pyrimidine	95
3.2	Chemistry of pyrimidine	101
3.2.1	Geometry of pyrimidine	101
3.2.2	Ionization of pyrimidine	102
3.2.3	Reactivity of pyrimidine	104
3.3	Synthesis of pyrimidine	105
3.3.1	Primary synthesis	105
3.3.1.1	One component synthesis	105
3.3.1.2	Two component synthesis	106
3.3.1.3	Three component synthesis	106
3.3.1.4	Four component synthesis	107
3.3.2	Synthesis from heterocycles	107
3.3.3	Two component synthesis (Principal Synthesis)	107

Chapter 4.

Synthesis and Biological Evaluation of 8-Carboxy-5-(un)substituted-7-(substituted amino)-2,3-dihydroimidazo[1,2-c]pyrimidines

4.1	Introduction	117
4.1.1	Biological activity of imidazopyrimidines	117
4.1.2	Methods for synthesis of imidazopyrimidines	123
4.1.2.1	Closure of five membered ring	123
4.1.2.2	Closure of six membered ring	129
4.1.2.3	Closure of both the rings	129
4.2	Aim of present work	131
4.3	Results and discussion	134
4.3.1	Synthetic approach	134
4.3.1.1	Synthesis of vinyl amidines	134
4.3.1.2	Synthesis of 4-chloropyrimidines	135
4.3.1.3	Synthesis of 4-(substituted amino)pyrimidines	138

4 3 1.4	Synthesis of 2,3-dihydroimidazo[1,2-c]pyrimidines	138
4 3 2.	Physical and spectral characteristics	140
4 3 2 1	4-(Substituted amino)pyrimidines	140
4 3 2 2	2,3-Dihydroimidazo[1,2-c]pyrimidines	143
4 4	Biological activity	148
4 4 1	Methods	148
4 4 1 1	Antimicrobial activity	148
4 4 1 2	Antimycobacterial activity	149
4 4 1 3	Antifungal activity	150
4 4.2	Results and discussion	150
4 4 2 1	Antimicrobial activity	150
4.4 2 1 1	4-(Substituted amino)pyrimidines	150
4 4 2 1 2	2,3-Dihydroimidazo[1,2-c]pyrimidines	151
4 4 2 2	Antimycobacterial activity	158
4 4 2 3	Antifungal activity	161
4 5	Experimental	176

Chapter 5.

Quantitative Structure Activity Relationship (QSAR) Study

5 1	Introduction	229
5 2	Historical development of QSAR	230
5 3	Molecular descriptors (parameters) used in QSAR	231
5 4	Taxonomy of QSAR	237
5 5	Tools and techniques of QSAR	240
5 6 1	Biological parameters	240
5 6.2.	Statistical methods	242
5 6 3.	Compound selection	243
5 6	QSAR study of a series of 2,3-dihydroimidazo[1,2-c]pyrimidines by Hansch model	245
5 7 1	General procedures	245
5 7 2	Results and discussion	246

Summary	254
References	256
