## Abstract

### CHAPTER – 1 INTRODUCTION

1.1	Iron ore resources of India	1
1.1.1	Noamundi iron ore	2
1.2	Need for Agglomeration	4
1.3	Need for Pelletizing	6
1.4	History of Pelletizing	7
1.4.1	First phase	7
1.4.2	Second phase	7
1.4.3	Third phase	8
1.5	Advantages of pellets	9
1.6	Pelletizing in the world, India and Tata Steel	11
1.7	Pelletizing process	15
1.7.1	Raw material preparation	15
1.7.2	Green pellet formation	17
1.7.3	Pellet hardening (Induration)	18
1.8	Present study	23

### CHAPTER – 2 LITERATURE REVIEW

2.1	Green pelletizing	27
2.1.1	Mechanisms of green pellet nucleation and growth	27
2.1.2	Effect of iron ore quality on green pelletizing behaviour and pellet quality	34
2.1.3	Effect of feed fineness on green pelletizing behaviour and pellet quality	37
2.1.4	Effect of binders on green pellet quality	40

2.1.5	Modelling of green pelletizing	42
2.2	Effect of fluxing agents on the pellet quality	44
2.2.1	Effect of CaO in the form of limestone on the pellet quality	44
2.2.2	Effect of MgO in the form of dolomite on the pellet quality	49
2.2.3	Effect of MgO in the form of magnesite on the pellet quality	51
2.2.4	Effect of MgO in the form of olivine on the pellet quality	55
2.3	Summary of literature review	57

### **CHAPTER – 3            EXPERIMENTAL PROCEDURE**

3.1	Experimental plan	58
3.1.1	Iron ore fines sample from the mines	58
3.1.2	Laboratory experiments	58
3.1.3	Experimental set-up and procedure	61
3.1.4	Parameter levels for laboratory investigation	70

### **CHAPTER – 4            RESULTS & DISCUSSION: CHARACTERIZATION AND GREEN PELLETTIZING STUDIES**

4.1	Characterization of the iron ore fines and fluxes	72
4.1.1	QEMSCAN characterization of iron ore fines	75
4.1.2	XRD analysis of iron ore and fluxes	86
4.1.3	TGA analysis of iron ore and fluxes	86
4.2	Grinding and granulometry studies	89
4.3	Green pelletizing studies	92
4.3.1	Effect of pelletizing feed fineness on pellet size distribution	92
4.3.2	Self-preserving curve of the Noamundi iron ore fines	94
4.3.3	Effect of pelletizing feed fineness on green pellet quality	97

**CHAPTER – 5                    RESULTS & DISCUSSION: QUALITY AND  
MICROSTRUCTURAL STUDIES OF FIRED  
PELLETS WITH DIFFERENT FLUXES**

5.1	Pellet firing studies	99
5.2	Effect of pellet basicity (CaO/SiO <sub>2</sub> ) and MgO content on The quality and microstructure of fired pellets using limestone and dolomite flux	103
5.2.1	Microstructural analysis of the pellets with varying basicity (CaO/SiO <sub>2</sub> ) and MgO content	107
5.2.1.1	Optical microstructure & image analysis of the MgO-free pellets	107
5.2.1.2	Optical microstructure & image analysis of the MgO pellets	110
5.2.1.3	SEM with EDS analysis of the MgO-free pellets	113
5.2.1.4	SEM with EDS analysis of the MgO pellets	113
5.2.2	Metallurgical properties of the pellets with varying basicity (CaO/SiO <sub>2</sub> ) and MgO content	118
5.2.2.1	Cold crushing strength (CCS)	118
5.2.2.2	Swelling	120
5.2.2.3	Reduction degradation	123
5.2.2.4	Reducibility	126
5.2.2.5	Softening-Melting characteristics	128
5.2.3	Composite Quality Index (CQI) or p-Index	132
5.3	Effect of pellet MgO content on quality and microstructure of fired pellets using magnesite flux	134
5.3.1	Microstructural analysis of pellets with varying MgO content	137
5.3.1.1	Optical microstructure & image analysis of the pellets with varying MgO content	137
5.3.1.2	SEM with EDS analysis of pellets with varying MgO content	140
5.3.2	Metallurgical properties of pellets with varying MgO content	143

5.3.2.1	Cold crushing strength (CCS)	143
5.3.2.2	Swelling	145
5.3.2.3	Reduction degradation	147
5.3.2.4	Reducibility	149
5.4	Effect of pellet MgO content on quality and microstructure of the fired pellets using pyroxenite flux	151
5.4.1	Microstructural analysis of the pellets with varying MgO	155
5.4.1.1	Optical microstructure & image analysis of the pellets with varying MgO content	155
5.4.1.2	SEM with EDS analysis of the pellets with varying MgO content	158
5.4.2	Metallurgical properties of the pellets with varying MgO content	163
5.4.2.1	Cold crushing strength (CCS)	163
5.4.2.2	Swelling	165
5.4.2.3	Reduction degradation	167
5.4.2.4	Reducibility	169
5.4.2.5	Softening-Melting characteristics	171
5.5	Advance metallurgical testing of pyroxenite fluxed pellets	173
5.5.1	Advanced free swelling	174
5.5.2	Advanced reduction degradation	176
5.5.3	Advanced swelling and softening	179
5.5.4	Critical observations from the advanced metallurgical tests	183
5.6	Summary of the results on effect of flux addition on the pellet quality	184
5.7	Implementation of results at 6 MTPA iron ore pelletizing plant at Tata Steel Jamshedpur	187

## **CHAPTER – 6          SUMMARY AND CONCLUSIONS**

6.1	Summary of laboratory test work	190
6.1.1	Characterization of iron ore fines and fluxes	190
6.1.2	Grinding and green pelletizing and induration studies	191
6.1.3	Effect of pellet basicity (CaO/SiO <sub>2</sub> ) and MgO content on quality & microstructure of pellets using limestone and dolomite flux	192
6.1.4	Effect of pellet MgO content on quality and microstructure of fired pellets using magnesite flux	194
6.1.5	Effect of pellet MgO content on quality and microstructure of fired pellets using pyroxenite flux	195
6.1.6	Advance metallurgical testing of the pyroxenite fluxed pellets	196
6.2	Conclusions on green pelletizing and effect of fluxes on the pellet quality	197

## **CHAPTER – 7          SCOPE FOR FUTURE STUDIES          199**

**Reference          200**

**Annexure-1    SEM microstructures of pellets**

**Certificate of honour**

**Global R&D day 2012 certificate**
