## **Chapter 1 Introduction**

## **Chapter 2 Review of Literature**

### **Hepatitis B Virus**

2.1 HBV: Introduction

2.2 Epidemiology

2.3 HBV: Structure of genome

2.4 Hepatitis B virus replication

2.5 HBV Infection

2.6 Clinical course of HBV infection

2.7 HBV Vaccination

2.8 Immune response to HBV infection

2.8.1 Innate immune response

2.8.2 Adaptive immune response

2.9 Mechanisms of HBV clearance

2.10 Mechanism of chronic viral persistence

2.11 Regulatory T cells

## 2.12 Neonatal immune response

### 2.12.1 Deficiencies of T-Cell-Mediated Immunity in the Neonates

## **Chapter 3: Aims and Objectives**

### 3.1 Unexplained Issues in Neonatal immunology or Existing Research Gaps?

### 3.2 Hypothesis for Possible mechanism of HBV chronicity in the Newborns

### 3.3 Specific objectives

## **Chapter 4 Materials and Methods**

### 4.1 Study Cohort

### 4.2 HBV DNA Quantification by Real Time PCR

### 4.3 Separation of Peripheral Blood Mononuclear Cells from whole blood by Ficoll Hypaque density gradient centrifugation method

### 4.4 Cell Counting by Trypan blue on Haemocytometer

### 4.5 Flow cytometry for phenotypic analysis of different cell surface and intracellular markers.

### 4.6 Detection of intracellular CD3 Zeta expression

### 4.7 Stimulation with synthetic viral peptides

### 4.8 Intracellular cytokine (IFN- $\gamma$ ) production

### 4.9 CD107 degranulation assay for CD8 T cell cytotoxicity analysis

### 4.10 CFSE proliferation assay for CD8 T cell proliferation analysis

### 4.11 Phenotypic analysis of B cells

### 4.12 Statistical analysis

## **Chapter 5. Results & Discussion**

### **Results**

5.1 Clinical characteristics of the subjects:

5.2 At Birth- Pre vaccination immune responses in the newborns

5.2.1 T cell phenotypic distribution in HBV DNA +ve, HBV DNA –ve and healthy newborns.

5.2.2 Lower Chemokine and Toll like receptor expression in HBV positive newborns

5.3 Comparative Cord and Peripheral Blood immune profiles of HBV positive newborns at birth

5.4 Phenotypic and Functional Characterization of CD8 T cells in cord blood

5.4.1 Decreased CD3  $\zeta$  chain expression on CD8 T cells in HBV positive newborns

5.4.2 Decreased IFN  $\gamma$  production by CD8 T cells upon stimulation with PMA and viral peptides

5.4.3 Reduced CD107a expression (marker of cytotoxicity) on CD8T cells upon stimulation with PMA and viral peptides

5.5 Post-vaccination immune responses in newborns

5.5.1 Vaccination is unable to reduce the elevated levels of T regulatory cells in HBV positive Newborns

5.5.2 Vaccination improved the Chemokine receptor CCR1, CCR3, CCR9 and Toll like Receptor TLR 2, TLR 4 and TLR9 expression in HBV positive newborns compared to Healthy newborns.

5.5.3 Increased Chemokine and Toll like receptor but decreased PD1 expression on T cells after vaccination in HBV positive newborns

### **Discussion**

Results

## **B cell response in HBV infected Newborns**

5.6 Dominance of regulatory transitional B cells in HBV positive compared to negative newborns

5.7 Post-vaccination declination of Transitional B cell population and increase in memory B cells in HBV positive newborns

5.8 Post vaccination enhanced expression of activation marker CD69 and Chemokine receptor CCR5 on memory B cells in HBV positive newborns

## **Discussion**
